April 2018

Introduction

The following report summarizes odor complaints received and odor surveillance activities during 2017 related to Rumpke Sanitary Landfill, located at 10795 Hughes Road in Colerain Township.

Beginning in 2007, Hamilton County Public Health (HCPH) collaborated with Rumpke and Southwest Ohio Air Quality Agency (Air Quality) to respond to citizen odor complaints 24/7. Since 2007, HCPH has compiled complaint data into periodic reports. The intent of these reports is to summarize and analyze the complex issue of odors and odor complaints at Rumpke Sanitary Landfill.

The subsurface heating event beginning in 2009 in the north end of the facility (Phase 5) created unique challenges for the facility to strictly control odors. Continued analysis of the data is valuable in measuring the effectiveness of odor control efforts undertaken by the facility.

New since 2013, HCPH has used mobile devices to capture complaint investigation data, which was necessitated by the increase in odor complaints. Electronic data capture eliminates the need to perform data entry of paper records allowing staff more time for field responses and odor surveillance. Utilizing GPS-enabled mobile devices, geospatial data is now collected alongside the observations allowing for better mapping capability.

In addition to complaint response, HCPH conducts odor surveillance monitoring of the facility in accordance with Ohio Environmental Protection Agency (OEPA) Internal Operating Procedure and Odor Scale, outlined below (Figure 1). A surveillance loop has been established based on complaint locations from 2016 (Figure 2). This route includes major roadways surrounding the facility through residential areas. An assessment of odor is made at all points along this loop, however only incidences of landfill-related odor and complaint locations are recorded. Periodic joint inspections with OEPA are conducted to “calibrate” assessment of odor and ensure consistency in applying the odor scale from Figure 1. The assumption can be made that if the surveillance loop was performed, no landfill-related odors were noted at all points along that route except where noted. Each record in the dataset is either a complaint location, a location where landfill-related odor was noted by the investigator, or a record that no odor was noted along the surveillance route.

Every complaint continues to be relayed to Rumpke for investigation. Results of Rumpke’s investigation are not currently included in this dataset, only HCPH investigation results are recorded here. Also, in order to streamline data capture and analysis, complaints are logged and tracked separately from the investigation or field responses.

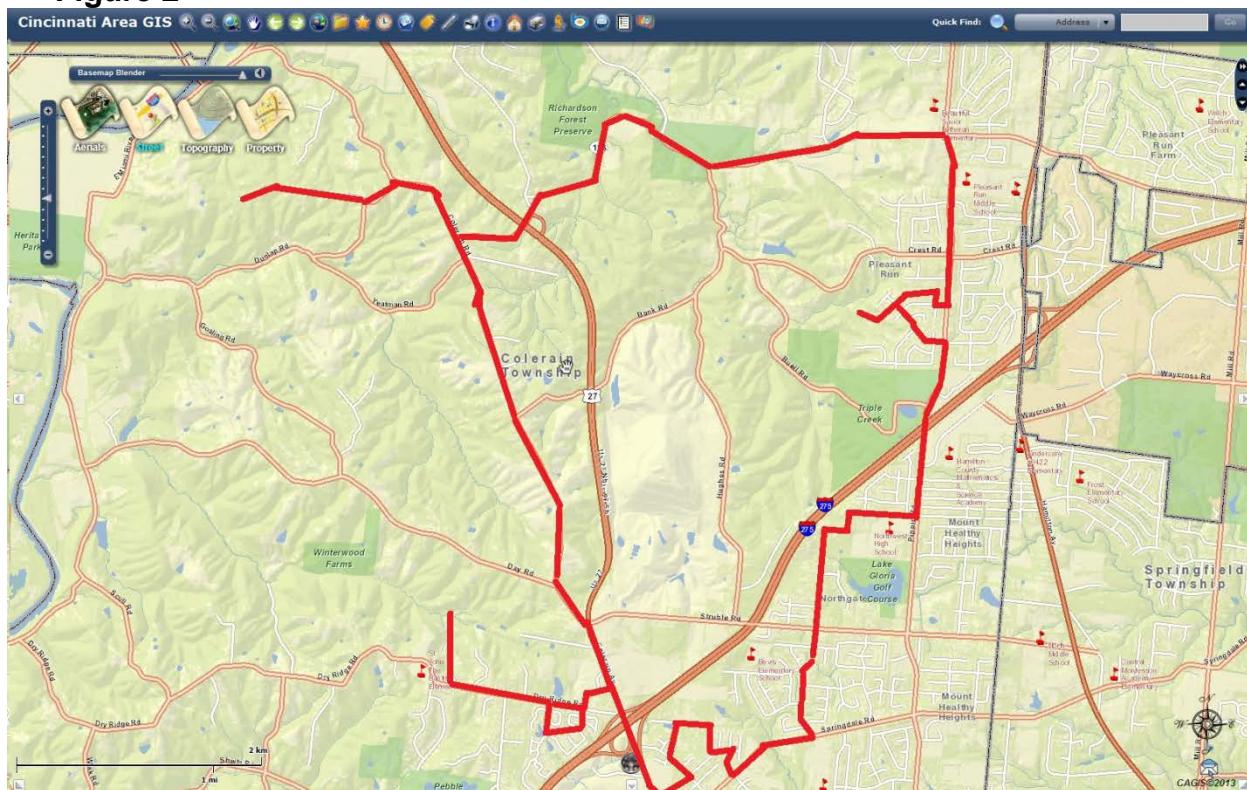

Figure 1

Odor Scale from OEPA Internal Operating Procedure

No Odor	Odor Not Detectable
Slight	Odor present in the air, which activates the sense of smell and the characteristics may or may not be distinguishable and/or definite, but not objectionable in short durations. This is characterized by occasional "whiffs" of odor, but is not persistent.
Moderate	Odor present in the air, which easily activates the sense of smell, is very distinct and clearly distinguishable, tends to be objectionable and/or irritating, and is persistent in the community.
Strong	Odor present in the air, which is objectionable and causes a person to attempt to avoid it completely.
Over-Powering	Odor present in the air, which is so strong that it is overpowering and intolerable for any length of time.

*Increments have been added to allow description of odor between the criteria described above (No Odor to Slight, Slight to Moderate, etc.).

Figure 2

Results

Table 1

RUMPKE ODOR - DATA COMPARISON 2007 - 2017												
		2017	2016	2015	2014	2013	2012	2011	2010	2009	2008	2007
Complaints	# of Complaints Received	195	336	314	223	420	500	566	437	121	106	56

	% Leachate odor	0	1	0	0	1	0	3	ND	ND	ND	ND
Response Time	% with Intensity described as greater than slight	3	4	4	1	3	-	-	-	-	-	-
	% Less than one Hour	19	23	22	22	20	94	92	84	76	84	ND
	% Less than four Hours	45	45	40	52	39	-	-	-	-	-	-

In 2017, 195 complaints were received regarding odor from Rumpke Sanitary Landfill. This is notably lower than 2016, and down considerably from a peak in 2011 of 566 complaints. There were 50 named complainants in 2017, down from a peak of 266 complainants in 2010. 22% of the complaints were made anonymously, similar to 21% in 2016. Complaints were received on 34% of the days in 2017, down from 2016 and 2015 where complaints were received on 42% and 46% of the days respectively. The percent of anonymous complaints over the last two year period continues to increase over the previous 4 year period.

The number of frequent complainants continues to be notable, with four complainants representing over one third of complaints in 2017. In 2016, there were 10 complainants representing 44% of the complaints.

38% of the complaints were reported at the caller's residence in 2017, down from 50% in 2016. 18% of all complaints were confirmed at the complainant's location. The majority (88%) of confirmed off-site odors in 2017 were garbage related. This highlights a 5-year trend of decreasing gas odors and increasing garbage odors confirmed off-site. In 2017, complaints were responded to within one hour 19% of the time. 45% of the complaints were responded to by HCPH within 4 hours of receiving the complaint.

With increased capabilities in data capture and better presence at and near the landfill to assess odor, new indices were introduced in 2013. The performance indices developed in 2013 for Table 1 were '% Days with Odor Noted' and '% Days with Intensity Described as Greater than Slight'. The percent of days with odor noted decreased dramatically from 86% to 44% from 2016 to 2017 respectively. The percent of days with odor described as greater than slight decreased slightly from 3.5% to 3.1% from 2016 to 2017 respectively.

Table 2

Complaint Location	Odor Intensity (No Odor - Moderate to Strong)						Total	Percent
	No Odor	No Odor to Slight	Slight	Slight to Moderate	Moderate	Moderate to Strong		
No	43	39	25	4	0	0	111	37%
Yes	158	15	16	3	1	0	193	63%
Grand Total	201	54	41	7	1	0	304	100%

The response/surveillance dataset for 2017 contains 304 observations or records (Table 2). 193 records are in response to complaints. 111 of these records were non-complaint locations where landfill odors were observed along the pre-defined surveillance route. In 43 of these records, no off-site odors were noted along the surveillance route.

Table 3

Number of Complaints (All)	195	Percent
Strictly Landfill Odor Complaints	187	96%
Complainant described deodorizer in complaint	8	4%
Complainant described strictly deodorizer	3	2%

Rumpke utilizes deodorizer as part of the odor control plan. Some residents have complained about the use of this deodorizer. In 8 of 195 complaints (4%), the complainant described the offending odor as involving the use of deodorizer (Table 3). This is on a continued decline from 31% in 2014, as indicated in Table 1.

Table 4

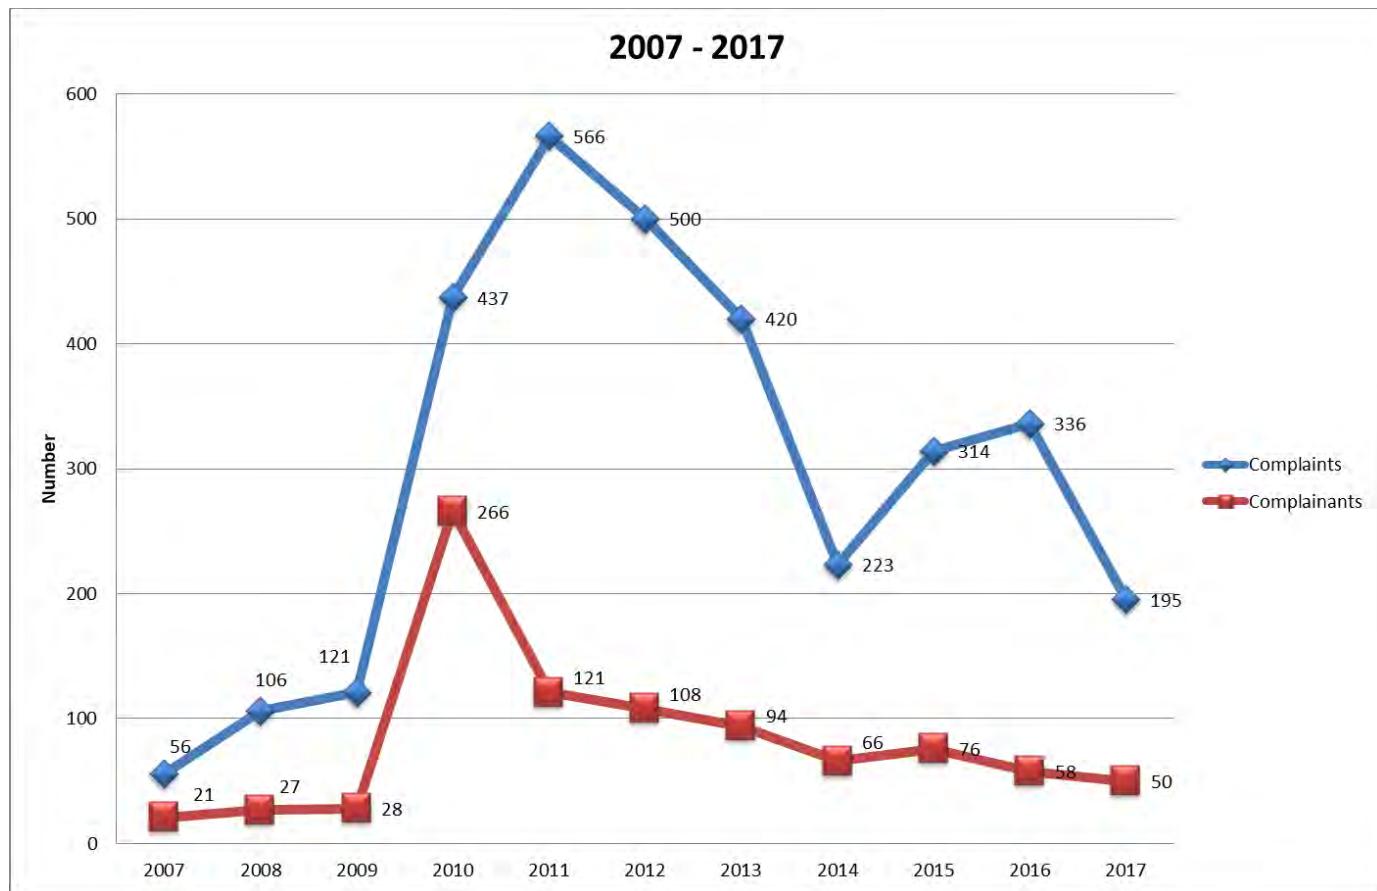

Deodorizer Observed	Odor Intensity (No Odor - Moderate to Strong)						Total	Percent
	No Odor	No Odor to Slight	Slight	Slight to Moderate	Moderate	Moderate to Strong		
No	188	20	19	2	-	-	229	75%
Yes	13	34	22	5	1	-	75	25%
Grand Total	201	54	41	7	1	0	304	100%

The presence of deodorizer was noted by HCPH during 25% of the observations. Deodorizer was generally observed with accompanied landfill odors, demonstrating continued conservative use.

Over the past 10 years there has been a rise and fall in odor complaints. This is primarily due to the sub-surface reaction occurring on the north end of the facility since 2009. In 2017, there were 141 fewer complaints than 2016, a 42% decrease, continuing a 7 year trend downward from the peak of 566 complaints in 2011.

The number of complainants reached a peak in 2010 with 266 individual named callers and has been on a steady decline, which indicates fewer complainants calling in more often (Figure 3).

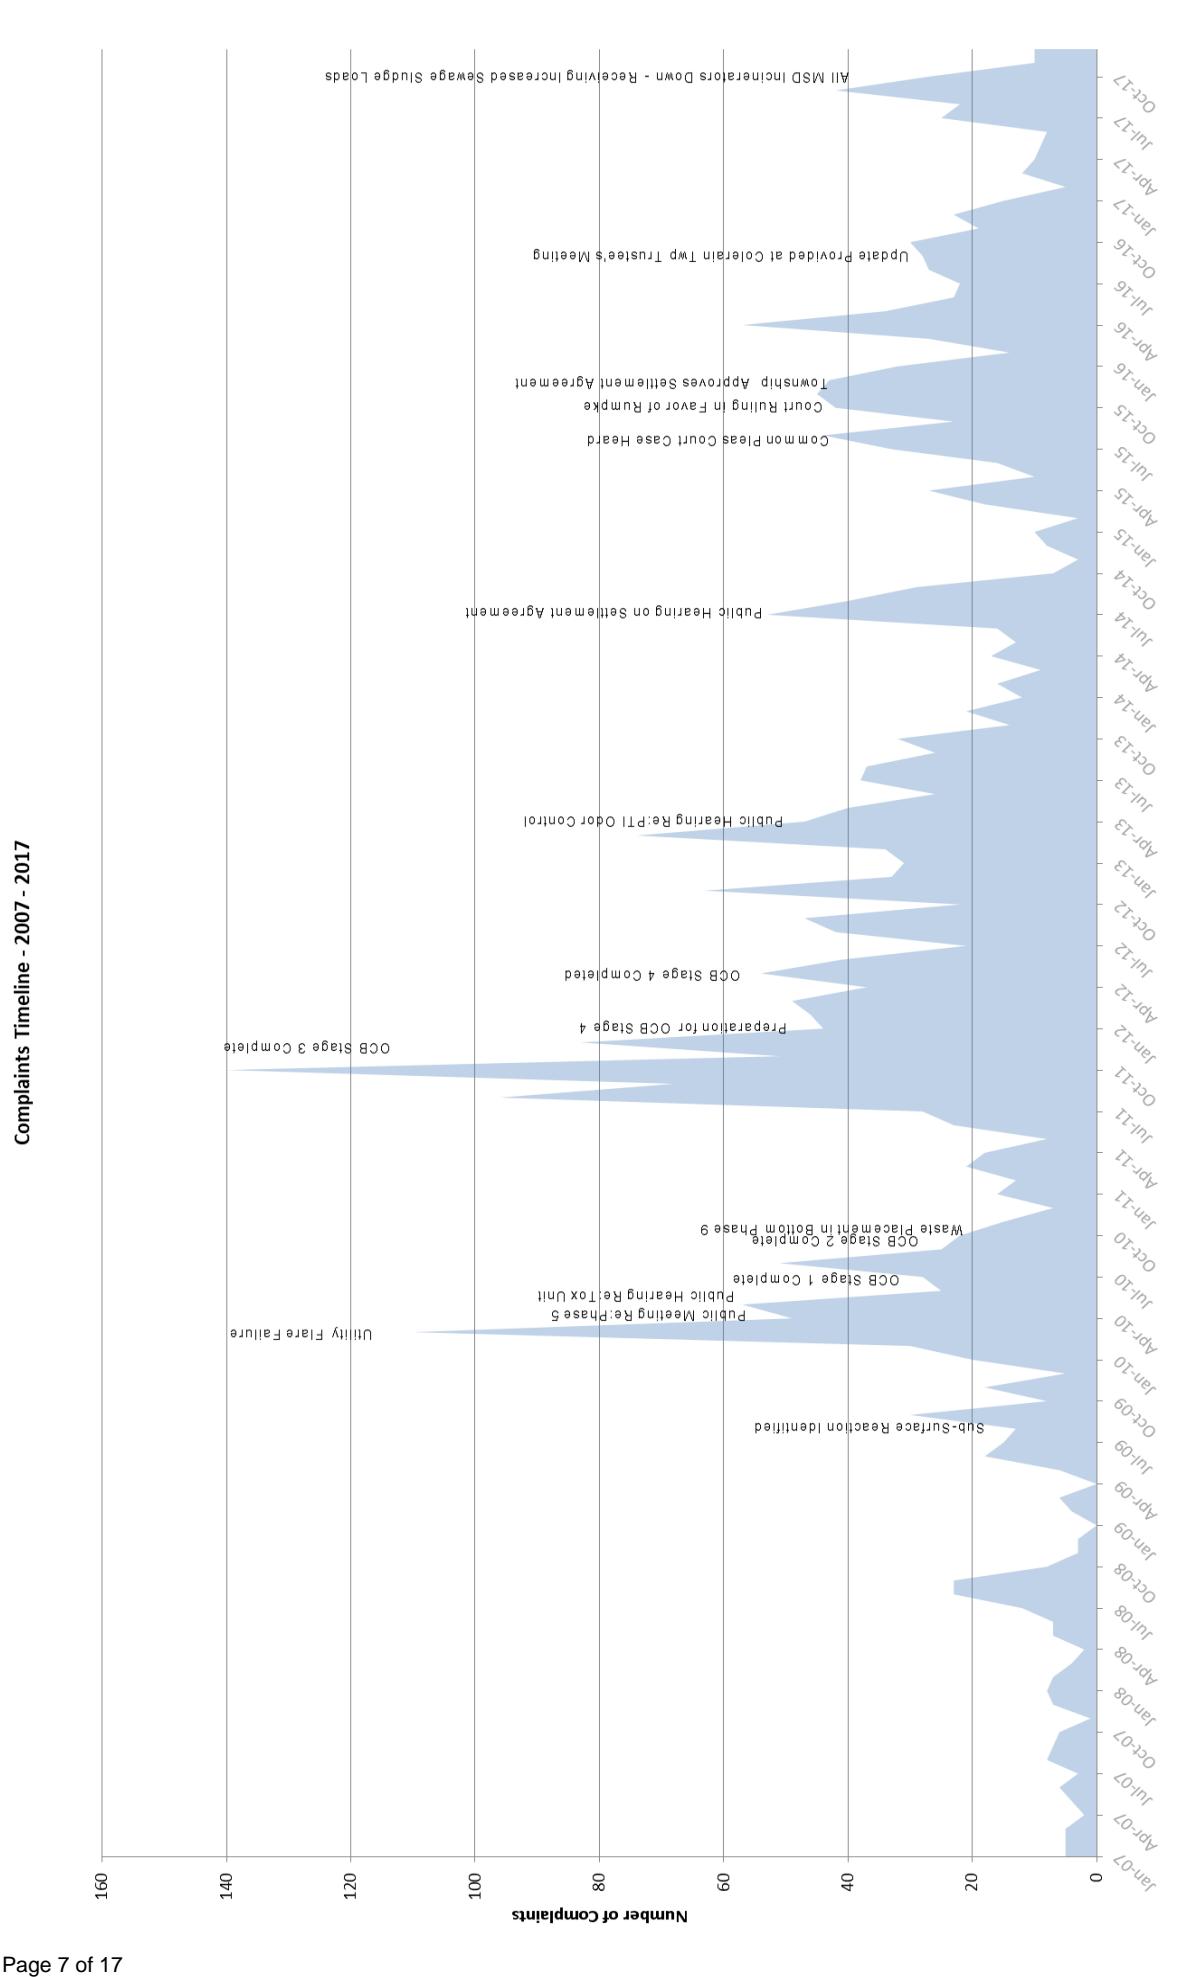

Figure 3

The following timeline graph indicates possible influencing factors (internal and external to the site) on number of complaints from 2007 to 2017 (Figure 4). In 2017 there was a spike in complaints from late August to mid-October that correlates with an increased volume of sewage sludge loads from Metropolitan Sewer District due to all three sludge incinerators being off-line for several weeks.

In review of complainant descriptions of odor, there were 12 instances where sewage sludge was noted, 10 of which occurred during this incinerator downtime. Staff observations however, noted possible sewage sludge on 7 occasions during that same period, 3 of which were in response to a complaint and staff response was within 1 hour.

Figure 4

The timeline graph reveals some possible influencing factors in the peaks and valleys of complaints.

Maps

Three maps are included as an attachment to this report.

1. Complaint Locations – 195 complaint locations in 2017 with color indicating type of odor and number tag indicating intensity observed during response.
2. Confirmed Complaint Locations – confirmed complaint locations in 2017 with color indicating type of odor and number tag indicating intensity observed.
3. All Confirmed Odor Locations - with color indicating type of odor and number tag indicating intensity observed.

Summary:

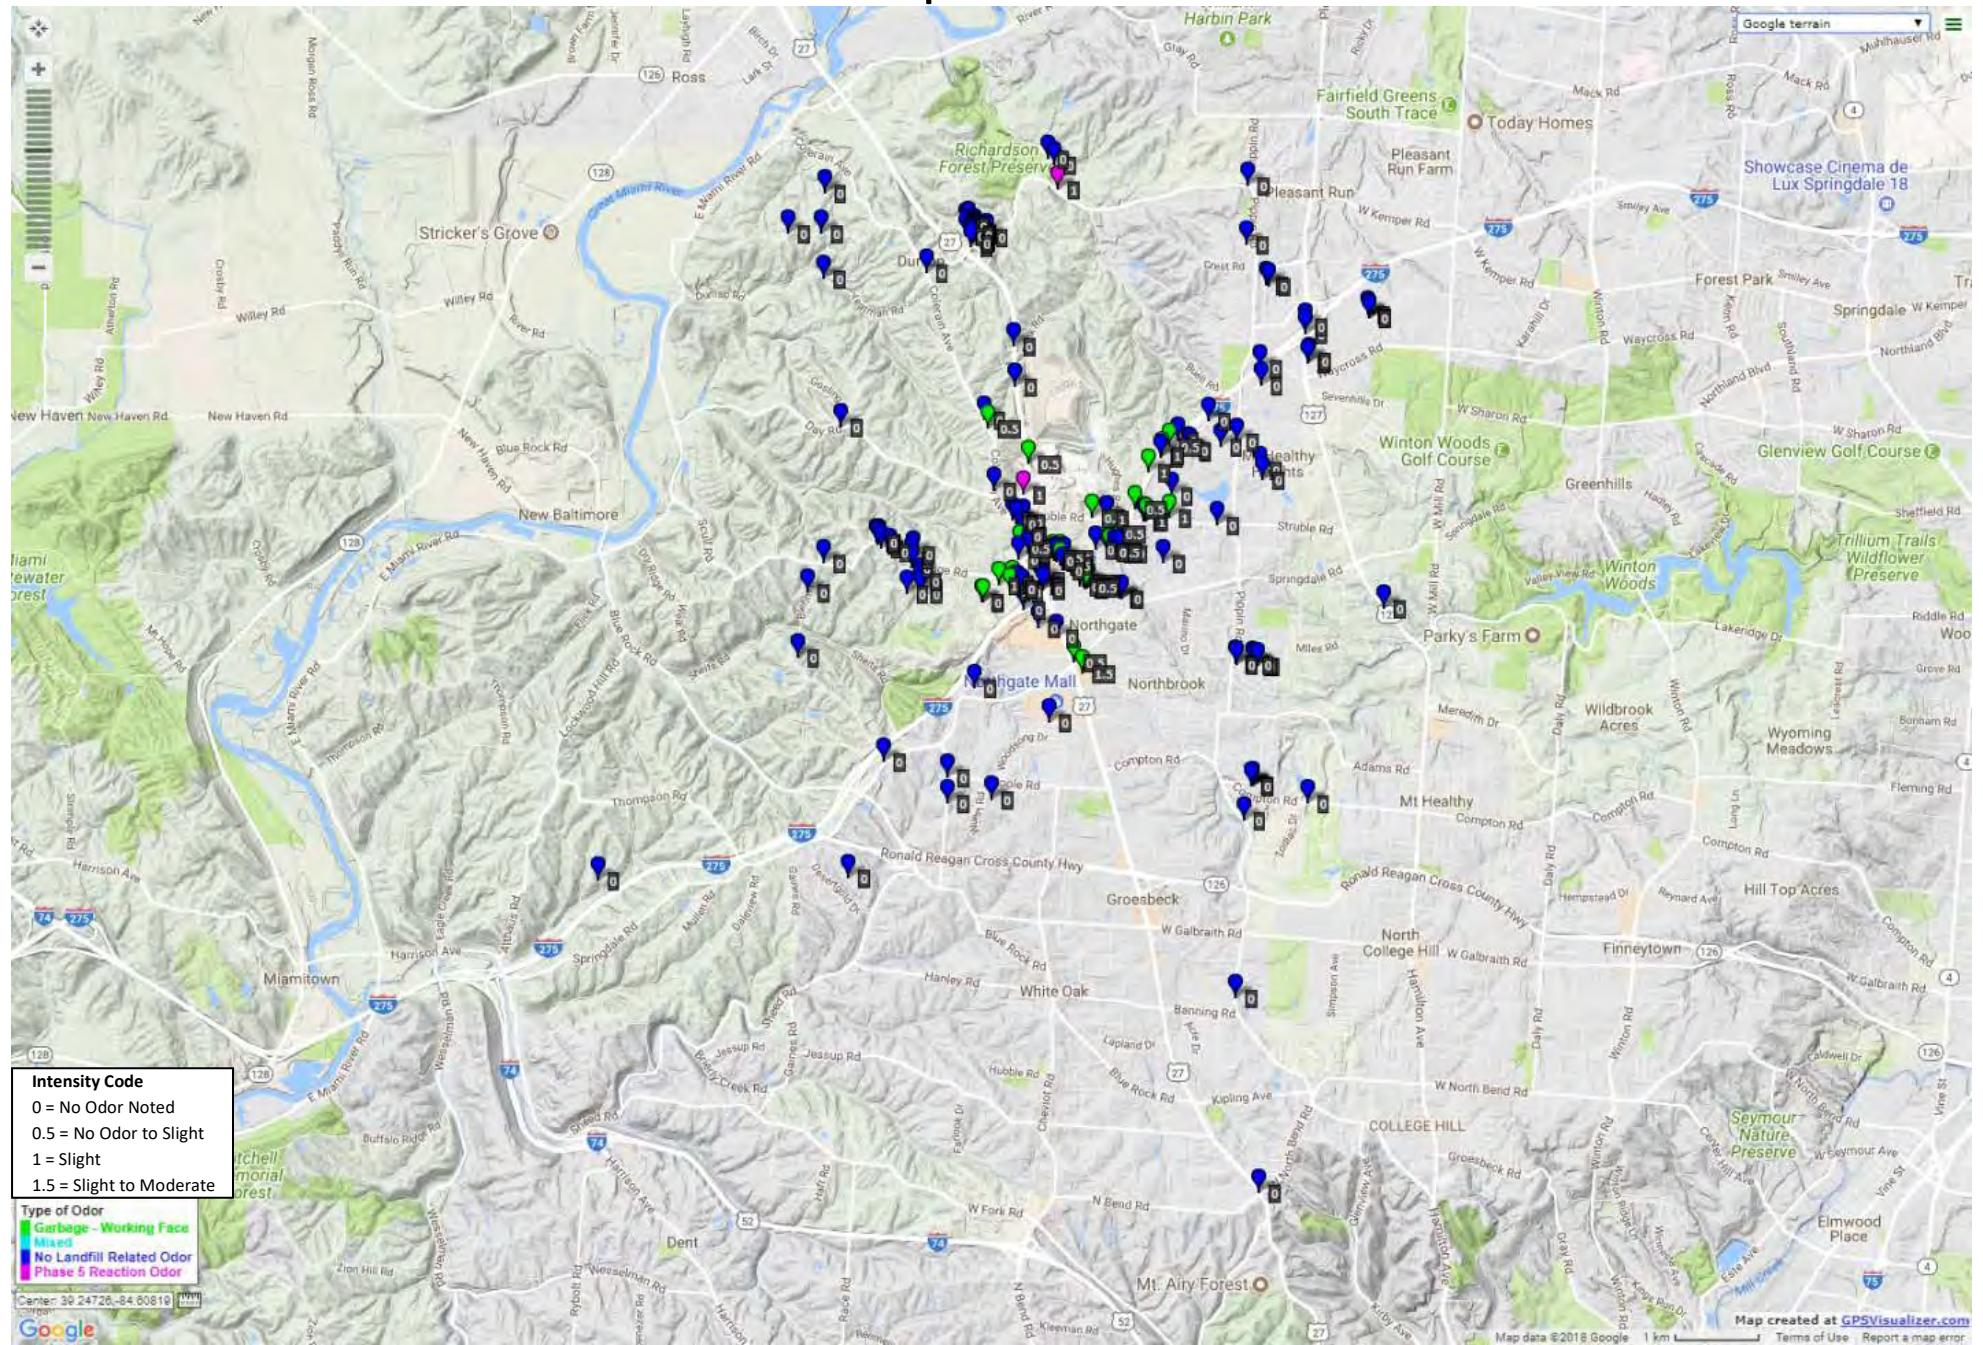

In 2017, there were fewer complaints than in the prior 7 years. Additionally, based on HCPH observations, there is an overall improvement in the odor situation at Rumpke Sanitary Landfill over the past 6 years. The sub-surface event occurring in the north end of the landfill contributed to off-site odors beginning as early as September 2009 and continues to be a source for some off-site odor occurrences. A comprehensive action plan to address odors and return operations to normal in the affected area continues to be implemented.

There were a higher percentage of garbage odors observed for two years running. Prior to 2017 and 2016, gas odors from the sub-surface event were the predominant observed odor. This could possibly be tied to better containment of gas odors on the north end. In addition, the deodorizer has been reformulated with less of a “top note” in response to deodorizer complaints, making it easier to distinguish garbage odors. Though permitted to use a stronger deodorizer formula, an attempt is being made to prevent deodorizer complaints. A formal Odor Control Management Plan addressing the affected area and other sources of odor from the landfill continues to be utilized by the facility.

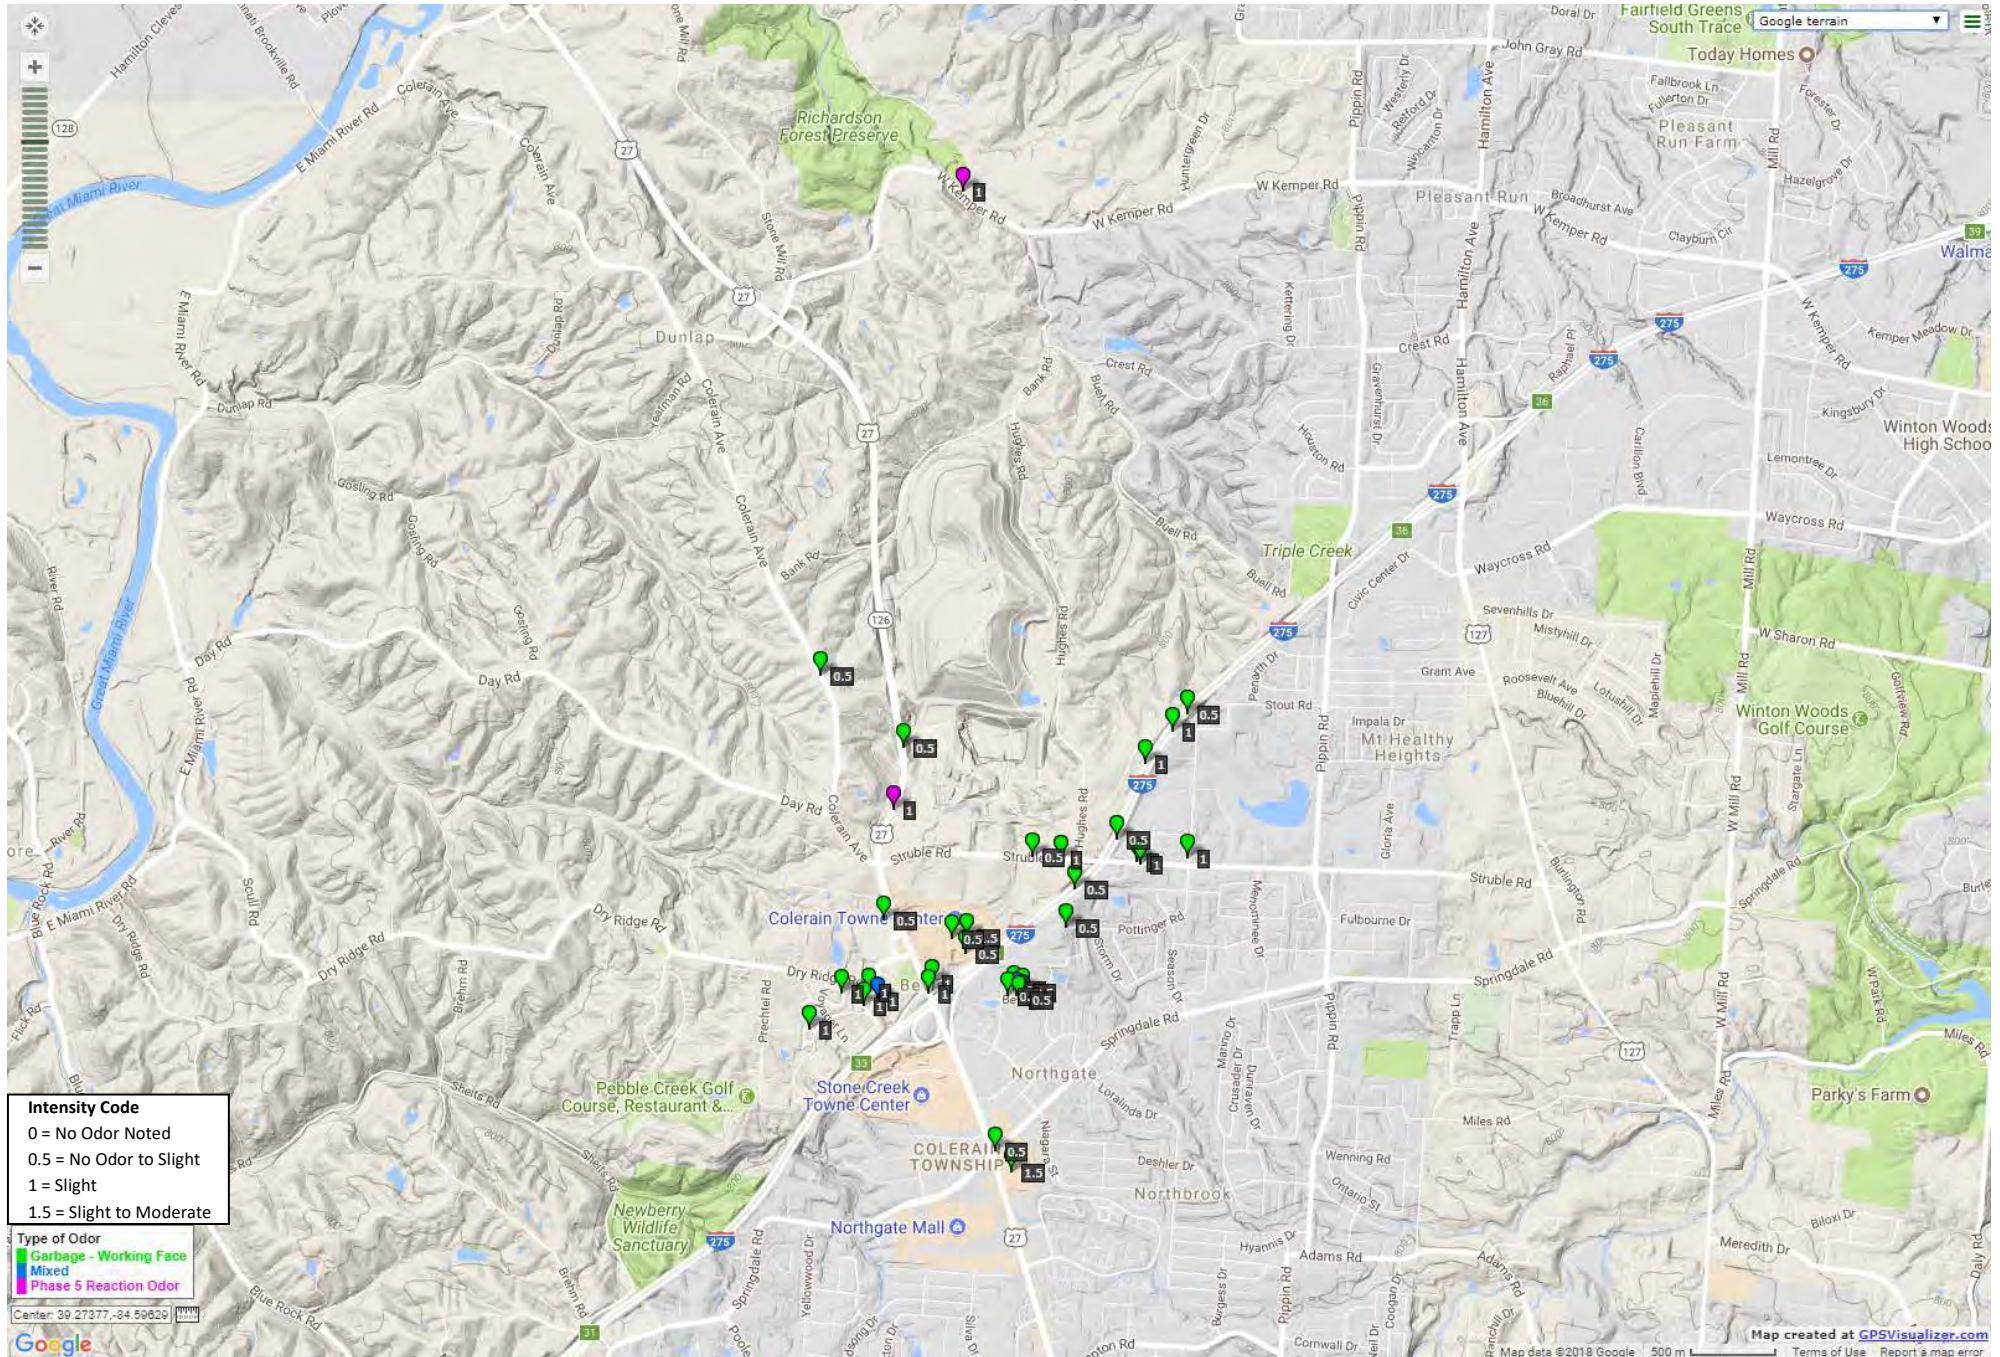

Rumpke has taken action to address odors by expanding gas collection and flare capability, applying an Odor Control Blanket (OCB) over the affected area - which has been reapplied on 51 acres with an odor impermeable membrane (EVOH – Ethyl Vinyl Alcohol), continued repairs of tears and leaks from the OCB and gas collection systems, eliminating odorous leachate from residential sewers, and numerous odor neutralizing delivery systems.

Hamilton County Public Health continues to work with Rumpke personnel and other agencies to identify measures to minimize the occurrence of off-site odors as much as possible. Additional efforts and odor control technologies continue to be evaluated to better target identified odor sources. Unannounced inspections and odor surveillance continue in order to monitor the facility. Periodic joint inspections between agencies are conducted to “calibrate” assessment of odor and ensure consistency in applying the odor scale from Figure 1. The 24-Hour Odor Complaint Hotline and complaint response continues to allow for the rapid investigation of odor complaints associated with Rumpke Sanitary Landfill.
