March 2019

Introduction

The following report summarizes odor complaints received and odor surveillance activities during 2018 related to Rumpke Sanitary Landfill, located at 10795 Hughes Road in Colerain Township.

Beginning in 2007, Hamilton County Public Health (HCPH) collaborated with Rumpke and Southwest Ohio Air Quality Agency (Air Quality) to respond to citizen odor complaints 24/7. Since 2007, HCPH has compiled complaint data into periodic reports. The intent of these reports is to summarize and analyze the complex issue of odors and odor complaints at Rumpke Sanitary Landfill.

The subsurface heating event beginning in 2009 in the north end of the facility (Phase 5) created unique challenges for the facility to strictly control odors. Continued analysis of the data is valuable in measuring the effectiveness of odor control efforts undertaken by the facility.

Rumpke has taken action to address odors by expanding gas collection and flare capability, applying an Odor Control Blanket (OCB) over the affected area - which has been reapplied on 51 acres with an odor impermeable membrane (EVOH – Ethyl Vinyl Alcohol), continued repairs of tears and leaks from the OCB and gas collection systems, eliminating odorous leachate from residential sewers, and numerous odor neutralizing delivery systems.

New since 2013, HCPH has used mobile devices to capture complaint investigation data, which was necessitated by the increase in odor complaints. Electronic data capture eliminates the need to perform data entry of paper records allowing staff more time for field responses and odor surveillance. Utilizing GPS-enabled mobile devices, geospatial data is now collected alongside the observations allowing for better mapping capability.

In addition to complaint response, HCPH conducts odor surveillance monitoring of the facility in accordance with Ohio Environmental Protection Agency (OEPA) Internal Operating Procedure and Odor Scale, outlined below (Figure 1). A surveillance loop has been established based on complaint locations from 2017 (Figure 2). This route includes major roadways surrounding the facility through residential areas. An assessment of odor is made at all points along this loop, however only incidences of landfill-related odor and complaint locations are recorded. Periodic joint inspections with OEPA are conducted to “calibrate” assessment of odor and ensure consistency in applying the odor scale from Figure 1. The assumption can be made that if the surveillance loop was performed, no landfill-related odors were noted at all points along that route except where noted. Each record in the dataset is either a complaint location, a location where landfill-related odor was noted by the investigator, or a record that no odor was noted along the surveillance route.

Every complaint continues to be relayed to Rumpke for investigation. Results of Rumpke’s investigation are not currently included in this dataset, only HCPH investigation results are recorded here. Also, in order to streamline data capture

and analysis, complaints are logged and tracked separately from the investigation or field responses.

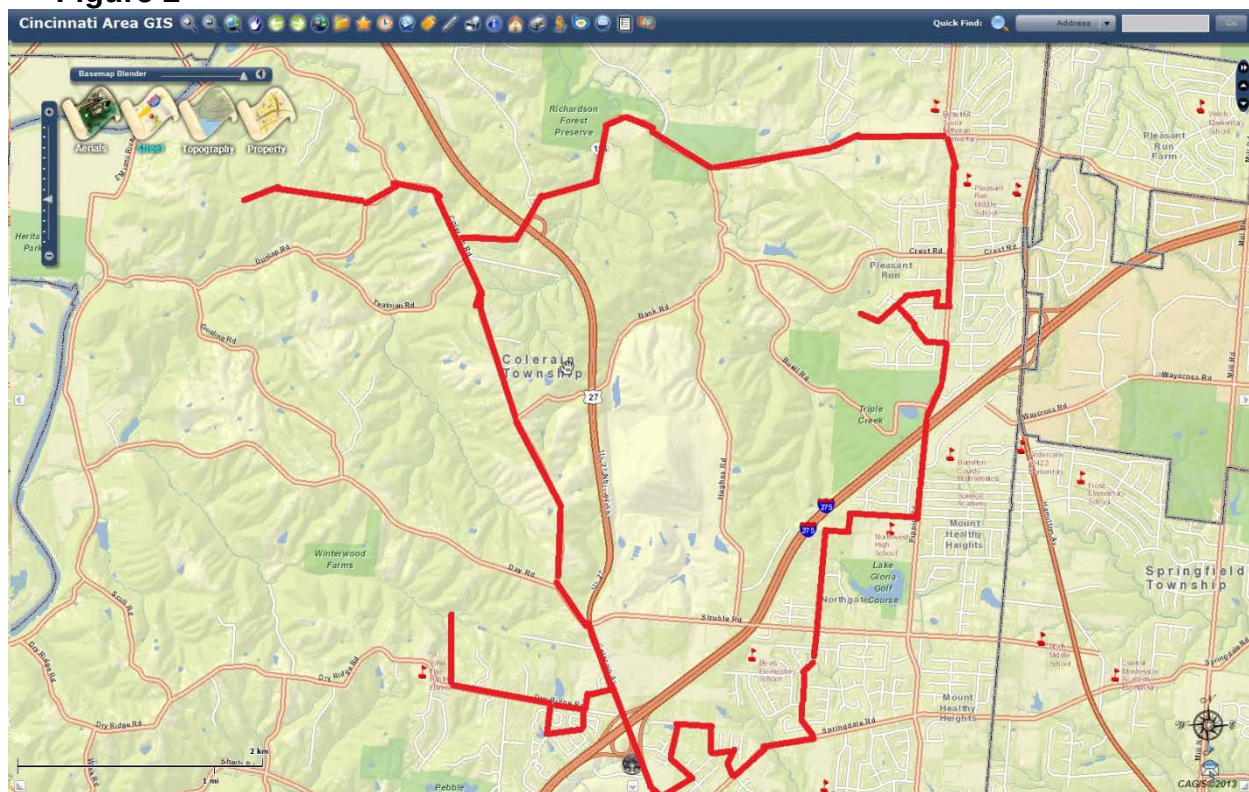

Figure 1

Odor Scale from OEPA Internal Operating Procedure

No Odor	Odor Not Detectable
Slight	Odor present in the air, which activates the sense of smell and the characteristics may or may not be distinguishable and/or definite, but not objectionable in short durations. This is characterized by occasional “whiffs” of odor, but is not persistent.
Moderate	Odor present in the air, which easily activates the sense of smell, is very distinct and clearly distinguishable, tends to be objectionable and/or irritating, and is persistent in the community.
Strong	Odor present in the air, which is objectionable and causes a person to attempt to avoid it completely.
Over-Powering	Odor present in the air, which is so strong that it is overpowering and intolerable for any length of time.

*Increments have been added to allow description of odor between the criteria described above (No Odor to Slight, Slight to Moderate, etc.).

Figure 2

Results

	% Less than four Hours	38	45	45	40	52	39	-	-	-	-	-	-

In 2018, 249 complaints were received regarding odor from Rumpke Sanitary Landfill. This is higher than 2017, but down considerably from a peak in 2011 of 566 complaints. There were 65 named complainants in 2018, down from of a peak of 266 complainants in 2010. 18% of the complaints were made anonymously, similar to the previous 3 years within the range of 15-22%. Complaints were received on 36% of the days in 2018, up slightly from 2017's 34% but down from 2016 and 2015 where complaints were received on 42% and 46% of the days respectively.

The number of frequent complainants (10 or more complaints) continues to be notable, with five complainants representing over one third of complaints in 2018. In 2016, there were 10 frequent complainants representing 44% of the complaints.

62% of the complaints were reported at the caller's residence in 2018, up significantly from 38% in 2017. However, only 8% of all complaints were confirmed at the complainant's location. The majority (90%) of confirmed off-site odors in 2018 were again garbage related. This highlights a 6-year trend of decreasing gas odors and increasing garbage odors confirmed off-site. In 2018, complaints were responded to within one hour 14% of the time. 38% of the complaints were responded to by HCPH within 4 hours of receiving the complaint. This is a slight drop from our previous several year's averages.

The percent of observed days with odor noted was 49%, up from 2017's 44%, but still dramatically lower than 2016's 86%. The percent of days with odor described as greater than slight continues to decrease from 3.1% to 1.3% from 2017 to 2018 respectively.

Table 2

Complaint Location	Odor Intensity (No Odor - Strong)						Total	Percent
	No Odor	No Odor to Slight	Slight	Slight to Moderate	Moderate	Strong		
No	35	51	26	2	0	0	114	31%
Yes	228	14	7	0	0	0	249	69%
Grand Total	263	65	33	2	0	0	363	100%

The response/surveillance dataset for 2018 contains 363 observations or records (Table 2). 249 records are in response to complaints. 114 of these records were non-complaint locations where landfill odors were observed along the pre-defined surveillance route. In 35 of these records, no off-site odors were noted along the surveillance route.

Table 3

Number of Complaints (All)	249	Percent
Landfill/Sewage Complaints (No Mention of Deodorizer)	210	84%
Complainant described deodorizer in complaint	39	16%
Complainant described strictly deodorizer	25	10%

Rumpke utilizes deodorizer as part of the odor control plan. Some residents have complained about the use of this deodorizer. In 39 of the 249 complaints (16%), the complainant described the offending odor as involving the use of deodorizer (Table 3). This is an uptick from 2017 where just 4% describe deodorizer, but overall a continued decline from 31% in 2014, as indicated in Table 1.

Table 4

Deodorizer Observed	Odor Intensity (No Odor - Strong)						Total	Percent
	No Odor	No Odor to Slight	Slight	Slight to Moderate	Moderate	Strong		
No	244	23	17	2			286	79%
Yes	19	42	16				77	21%
Grand Total	263	65	33	2	0	0	363	100%

The presence of deodorizer was noted by HCPH during 21% of the observations. Deodorizer was generally observed with accompanied landfill odors, demonstrating continued conservative use.

Table 5

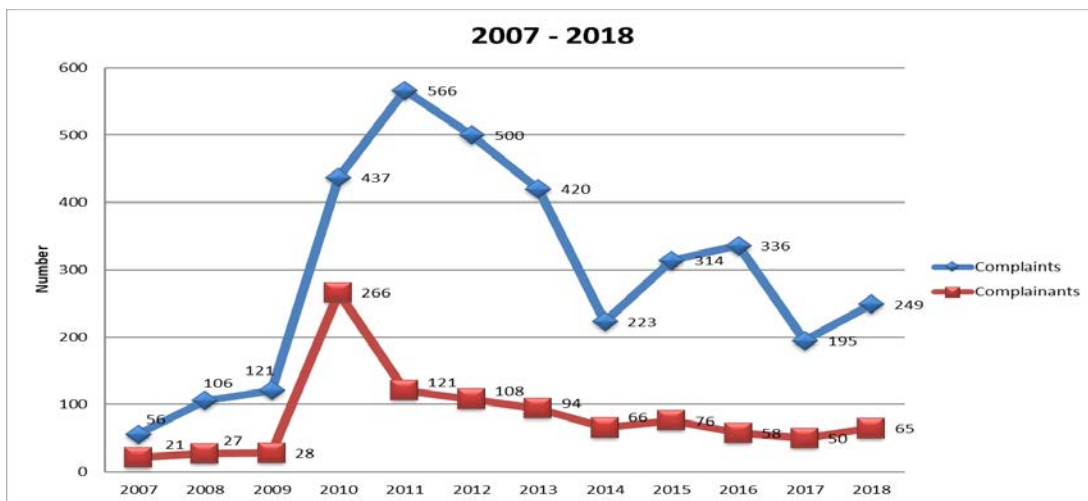

Number of Complaints (All)	249	Percent
Landfill/Deodorizer Complaints (no mention of Sewage)	218	88%
Complainant described sewage in complaint	31	12%
Complainant described strictly sewage	27	11%

There was a significant number of complaints, where the primary concern was of a sewage or sewage sludge odor, with 12% of complaints mentioning sewage or some variant thereof. Though there were episodes of increased sewage sludge receipt at the landfill due to scheduled and unscheduled MSD incinerator shut downs, rarely were sewage odors verified during field responses. In fact on only one occasion were sewage type odors witnessed off-site of the landfill.

Over the past 11 years there has been a rise and fall in odor complaints. This is primarily due to the sub-surface reaction occurring on the north end of the facility since 2009. In 2018, there were 249 complaints, a 28% increase over 2017 complaints. Overall there is a continuing 8 year trend downward from the peak of 566 complaints in 2011.

The number of complainants reached a peak in 2010 with 266 individual named callers and has been on an overall decline (Figure 3).

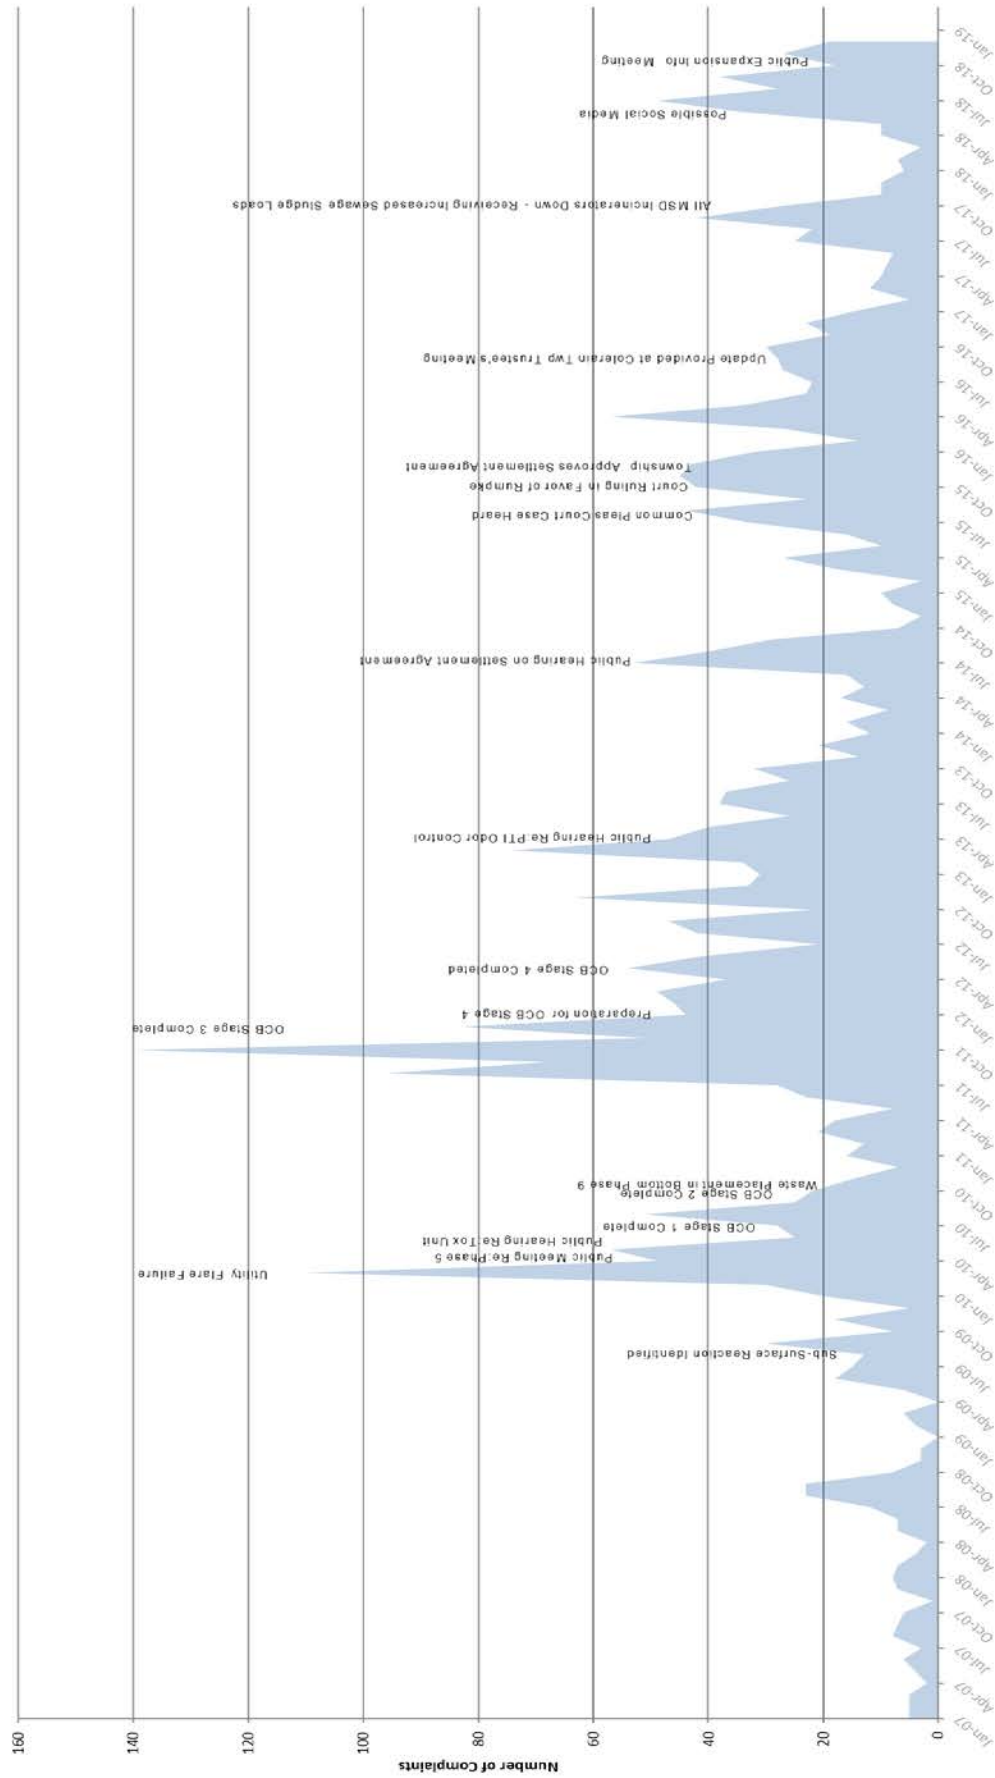

Figure 3

The following timeline graph indicates possible influencing factors (internal and external to the site) on number of complaints from 2007 to 2018 (Figure 4). In 2018 there were a couple of peaks possibly corresponding to two notable events. In May/June and again in September there was considerable “buzz” on the topic of Rumpke and odor on social media platforms. These are called out not to discount these complaints, rather to acknowledge that some complaints or intolerance of odor can be prompted by discussion on these sites. Another notable event in 2018 was the informational meeting held by Ohio EPA regarding eastern expansion which occurred on October 11th.

Figure 4

Complaints Timeline - 2007 - 2018

The timeline graph reveals some possible influencing factors in the peaks and valleys of complaints.

Mapping:

1. Complaint Locations – 249 complaint locations in 2018 with color indicating type of odor and number tag indicating intensity observed during response. (Figure 5)
2. Confirmed Complaint Locations – confirmed complaint locations in 2018 with color indicating type of odor and number tag indicating intensity observed. (Figure 6)
3. All Confirmed Odor Locations - with color indicating type of odor and number tag indicating intensity observed. (Figure 7)

Summary:

In 2018, there were 54 more complaints than in 2017. However, based on HCPH observations, there is an overall improvement in the odor situation at Rumpke Sanitary Landfill over the past 7 years. The sub-surface event occurring in the north end of the landfill contributed to off-site odors beginning as early as September 2009 but seems to be controlled by the odor control blanket and collection of gases. A comprehensive action plan to address odors and return operations to normal in the affected area continues to be implemented.

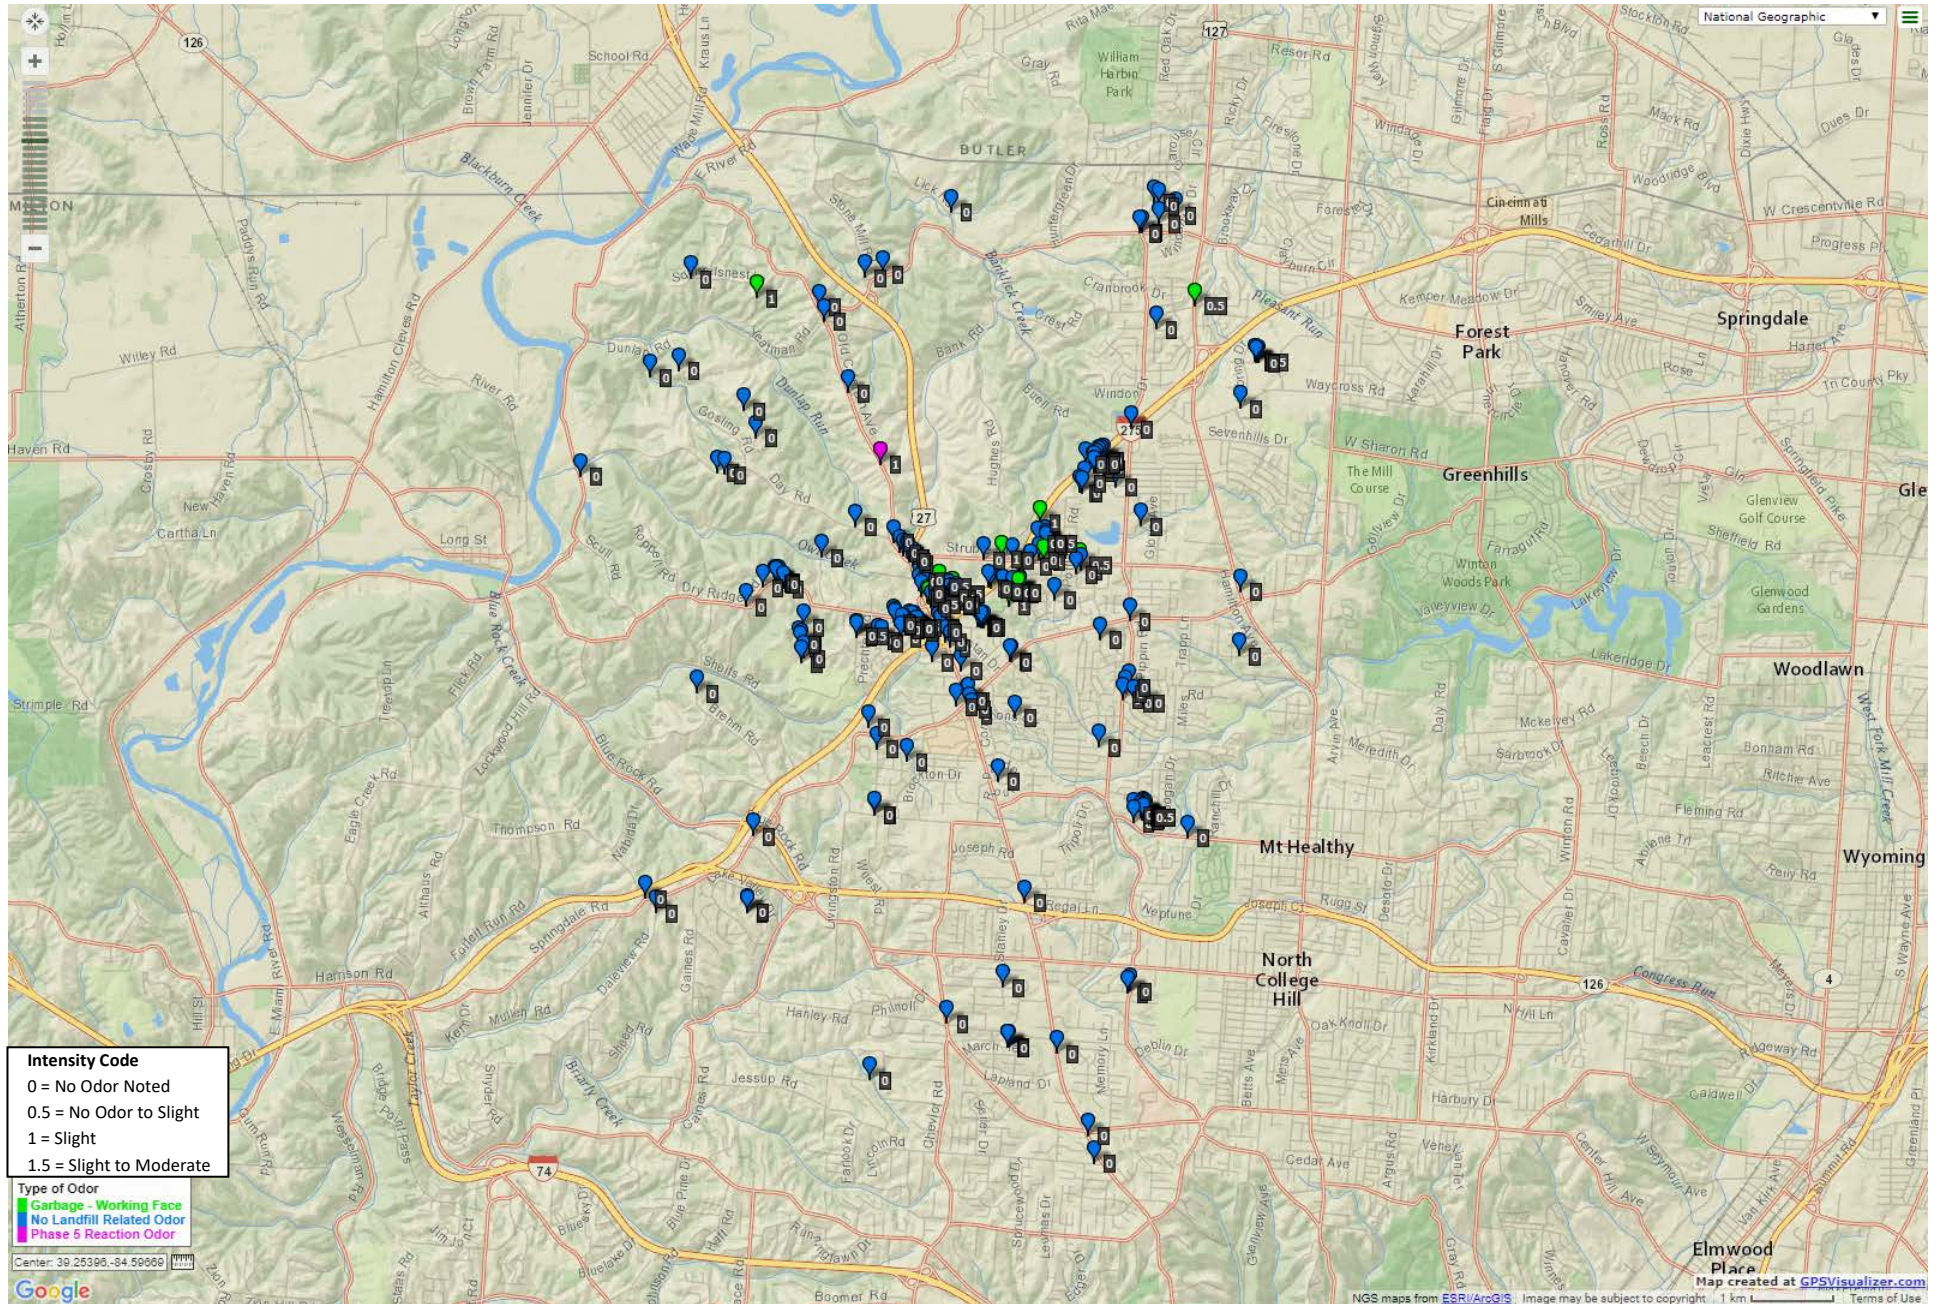

There were a higher percentage of garbage odors observed for the third consecutive year. Prior to 2016, gas odors from the sub-surface event were the predominant observed odor. In response to deodorizer complaints, the deodorizer has been reformulated with less of a “top note”, which results in it being easier to distinguish garbage odors. Though the operator is permitted to use a stronger deodorizer formula, an attempt is being to prevent deodorizer complaints which in 2018 represented 16% of the complaints, up from 4% in 2017.

Recently, another specific complaint is sewage type odors which were rarely mentioned prior to 2017. In 2017, 6% of the complaints described a sewage type odor. In 2018, that doubled to 12% of the complaints describing sewage type odors. Though particularly pungent and immediately evident when near, odors from sewage sludge were rarely witnessed off-site. It is suspected that some complainants are smelling loads in transit which should be short term in nature. A formal Odor Control Management Plan addressing the affected area and other sources of odor from the landfill continues to be utilized by the facility.

Hamilton County Public Health continues to work with Rumpke personnel and other agencies to identify measures to minimize the occurrence of off-site odors as much as possible. Additional efforts and odor control technologies continue to be evaluated to better target identified odor sources. Unannounced inspections and odor surveillance continue in order to monitor the facility. Periodic joint inspections between agencies are conducted to “calibrate” assessment of odor and ensure consistency in applying the odor scale from Figure 1. The 24-Hour Odor Complaint Hotline and complaint response continues to allow for the rapid investigation of odor complaints associated with Rumpke Sanitary Landfill.
