## Births and Deaths

Hamilton County Public Health facilitates the collection of birth and death data in the community. This information is used for the issuance of birth and death certificates, but it is also a valuable tool for measuring the health status of your community. This information was used to identify the occurrence of critical birth outcomes and associated risk factors. These are outlined in Table 1 and include low-weight births, preterm births, infant deaths, late prenatal care, and teen births. Listed below are selected 2009 birth statistics for your community.

Number of Births: 426  
 Birth Rate: 10 per 1000 residents  
 Number of Girls: 222  
 Number of Boys: 204

**Table 1. Adverse Birth Outcomes and Associated Risk Factors in Anderson Township, Hamilton County, Ohio, and the United States**

	Anderson Township (2009)	Anderson Township (2006-2008)	Hamilton County*	Ohio*	US**
Number of Births	426	1,356	11,373	144,568	4,131,019
<b>Adverse Birth Outcomes</b>					
Low birth weight (<2500 grams)	6.1%	7.8%	10.1%	8.6%	8.2%
Pre-term births (<37 weeks)	10.1%	10.8%	14.0%	12.1%	12.2%
<b>Risk Factors</b>					
Medical risk factors during pregnancy	27.0%	26.0%	36.2%	28.4%	-
Mother's age (<20 yrs)—teen births	2.1%	2.1%	11.1%	10.8%	10%
Mother's age (>34 yrs)	27.0%	27.3%	11.8%	11.6%	14.2%

The health issues facing a community are often reflected in local mortality rates and primary causes of death. The mortality rate for your community is shown in Table 2 below; rates for Hamilton County, Ohio and the United States are provided for comparison. Years of Potential Life Lost (YPLL), a measure of premature and possibly preventable death, is also included in Table 2. The YPLL is calculated by summing all years of life lost under the age of 75. The standardized mortality ratio (SMR), also presented in Table 2, is a health indicator for a community that reflects expected versus observed mortality. An SMR greater than 100% is an indicator of higher than expected death in a community. The primary causes of death of residents in your community are depicted in Figure 1 below.

**Table 2. Death Statistics in Anderson Township, Hamilton County, Ohio and the United States**

	†Anderson Township (2009)	†Anderson Township (2006-2008)	Hamilton County*	Ohio*	US***
Number of Deaths	324	934	7,505	107,062	2,423,712
†Death rate (per 1000 residents)	7.5	7.1	9.3	9.3	8.0
Years of Potential Life Lost	1,492	4,359	-	-	-
Standardized Mortality Ratio	80%	77%	-	-	-
Infant Deaths	1	4	113	1,109	-

Not Classified: 233 deaths

## Injury

Injury, a largely preventable and predictable health outcome, is a pressing public health issue in Hamilton County. According to the Centers for Disease Control and Prevention, “injury is a leading killer in all 50 states”.<sup>1</sup> Injury remains a leading cause of death in Hamilton County and non-fatal injuries contribute to an even larger community burden in terms of populations affected and healthcare costs. By examining injury trends, Hamilton County Public Health can identify emerging problems and help support community initiatives to prevent injury. Injuries are described by mechanism, or what caused the injury such as a fall or motor vehicle accident. The prevalence and mechanisms of injury rates can vary by community and populations within the community.

The most common mechanisms of injury in Hamilton County are falls, motor vehicle accidents, and struck by/against\*. The 2008-2009 age-specific rates of these injuries in your community and the county are displayed in Table 3. Over a two year period (2008-2009), there were 6,832 injuries in your community that resulted in emergency department visits, hospitalizations, or deaths. Death was the result of 21 injuries while all other injuries were non-fatal (Table 4). Figure 2 displays injury trends observed from 2004 to 2009 for the abovementioned mechanisms of injury.

**Table 3. Top Three Mechanisms of Injury in Anderson Township and Hamilton County, 2008-2009**

Mechanism of Injury	Age Group	Anderson Township Rate (2008-2009) <i>(per 1,000 residents)</i>	Hamilton County Rate (2008-2009) <i>(per 1,000 residents)</i>
Falls	0-19 years old	74.9	68.4
	20-64 years old	31.4	39.8
	65 or greater	128.6	112.2
Motor Vehicle Related	0-19 years old	13.9	17.3
	20-64 years old	13.8	24.2
	65 or greater	6.7	8.6
Struck by/against*	0-19 years old	68.5	53.1
	20-64 years old	24.7	27.2
	65 or greater	18.0	9.5

**Table 4. Injury Related Deaths, Anderson Township, 2004-2009**

Mechanism of Injury	Year Group			Total
	2004-2005	2006-2007	2008-2009	
Drowning	0	0	1	1
Fall	5	13	11	29
Firearm	9	4	1	14
MV Related	4	2	2	8
Overexertion	0	1	0	1
Poisoning	3	5	4	12
Suffocation	4	2	1	7
Unspecified	0	0	1	1
Total	25	27	21	73

\* Injury resulting from being struck by (hit) or crushed by a human, animal, or inanimate object or force other than a vehicle or machinery; injury caused by striking (hitting) against a human, animal, or inanimate object or force other than a vehicle or machinery.

**Figure 2. Injury Rate for the Top Mechanisms of Injury by Year Group in Anderson Township, Ohio – 2004-2009**

Note: Falls, motor vehicle related, and struck by/against were the top mechanisms of injury for Hamilton County. Injury rates in these categories for each municipality were calculated for each year. Years were aggregated into 2-year groupings. The rate displayed is the mean of the 2 year group.

## Communicable Disease

Communicable diseases are caused by several types of infectious agents that can be spread to humans and, therefore, present a threat to public health. These diseases often cause serious illnesses and some have the potential to compromise our food and water supplies resulting in community outbreaks. Traditionally, these diseases are transmitted by person-to-person contact, contaminated food or water, and/or contact with insects and animals that harbor disease. Hamilton County Public Health tracks these diseases daily in order to investigate sources of infection, detect trends, educate the public, and implement control measures and policies to prevent spread. Below is an overview of the reportable communicable diseases that affected your community during the nine year period between 2002-2010 (Table 5, Figure 3).

**Table 5. Communicable Disease Statistics in Anderson Township and Hamilton County, Ohio, 2002-2010**

	Incidence Rate 2002-2004 <i>(per 1,000 residents)</i>		Incidence Rate 2005-2007 <i>(per 1,000 residents)</i>		Incidence Rate 2008-2010 <i>(per 1,000 residents)</i>	
	Anderson Township	Hamilton County	Anderson Township	Hamilton County	Anderson Township	Hamilton County
GI	0.7	0.8	3.5	2.9	0.9	1.4
Vector Borne	0.1	0.1	0.1	0.2	0.1	0.2
Viral Hepatitis	1.0	4.0	1.5	4.6	1.3	3.8
STI	-	-	-	-	2.5	23.0
Other	1.0	1.2	2.1	2.0	2.0	2.4

Notes: Disease Type is comprised of diseases that normally fall into one of the following four categories: Gastrointestinal Diseases (GI), Animal/Vector-borne Diseases, Viral Hepatitis, Sexually Transmitted Infections (STI), and Other. Incidence Rate was omitted ( - ) for years in which no data were available. Years were aggregated into 3-year groupings. Rates shown are rounded to the nearest tenth for presentation.

**Figure 3. Reportable Communicable Diseases by Disease Type and Year Group in Anderson Township, Ohio — 2002-2010**

Notes: Disease Type is comprised of diseases that normally fall into one of the following four categories: Gastrointestinal Diseases (GI), Viral Hepatitis, Animal/Vector-borne Diseases, and Other. Disease Types for which no data is displayed indicate zero incidences. Years were aggregated into 3-year groupings. Rates shown above the vertical graph bars are rounded to the nearest tenth for presentation purposes and are representative of the displayed rates.
