August 2014

Introduction

The following summarizes odor complaints received and odor surveillance activities during 2013 related to Rumpke Sanitary Landfill located at 10795 Hughes Road in Colerain Township.

Beginning in 2007, Hamilton County Public Health (HCPH) has partnered with Rumpke and Southwest Ohio Air Quality Agency (Air Quality) to respond to citizen complaints 24/7. Since 2007, HCPH has compiled odor complaint data into periodic reports. The intent of these reports is to summarize and analyze the complex issue of odors and odor complaints at Rumpke Sanitary Landfill.

The subsurface heating event affecting the north end of the facility (Phase 5) has created unique challenges for the facility to strictly control odors. Continued analysis of the data is valuable in measuring the effectiveness of odor control efforts undertaken by the facility.

New for 2013, is the use of mobile devices by HCPH to capture complaint investigation data. This was necessitated by the high incidence of odor complaints beginning in the fourth quarter of 2009 through current. Electronic data capture eliminates the need to perform data entry of paper records allowing staff more time for field responses and odor surveillance. Utilizing GPS-enabled mobile devices, geospatial data is now collected alongside the observations allowing better mapping capability.

In addition to complaint response, HCPH initiated odor surveillance monitoring of the facility in accordance with Ohio EPA Internal Operating Procedure and Odor Scale outlined below. A surveillance loop has been established based on complaint locations from 2012 (Figure 1). This route includes major roadways surrounding the facility through residential areas. An assessment of odor is made at all points along this loop, however only incidences of landfill-related odor and complaint locations are recorded. The assumption can be made that if the surveillance loop was performed, no landfill-related odors were noted at all points along that route except where noted. Each record in the dataset is either a complaint location or a location where landfill related odor was noted by the investigator.

Every complaint continues to be relayed to Rumpke for investigation – results of Rumpke's investigation are not currently included in this latest dataset. Only HCPH and Air Quality investigation results are contained in the dataset. Also, in order to streamline data capture and analysis, complaints are logged and tracked separately from the investigation or field responses.

In 2013, the response/surveillance dataset contains 614 observations or records. Of these observations, 420 were in response to reported odor complaints. One hundred ninety one were non-complaint locations where landfill odors were observed along a predefined surveillance route. Twenty-five records are from surveillance where no off-site odors were noted. Due to the fact that during January and February we were transitioning to the new system, 22 complaints

are not in the dataset of observations. The missing 22 records are not expected to significantly change the analysis contained herein.

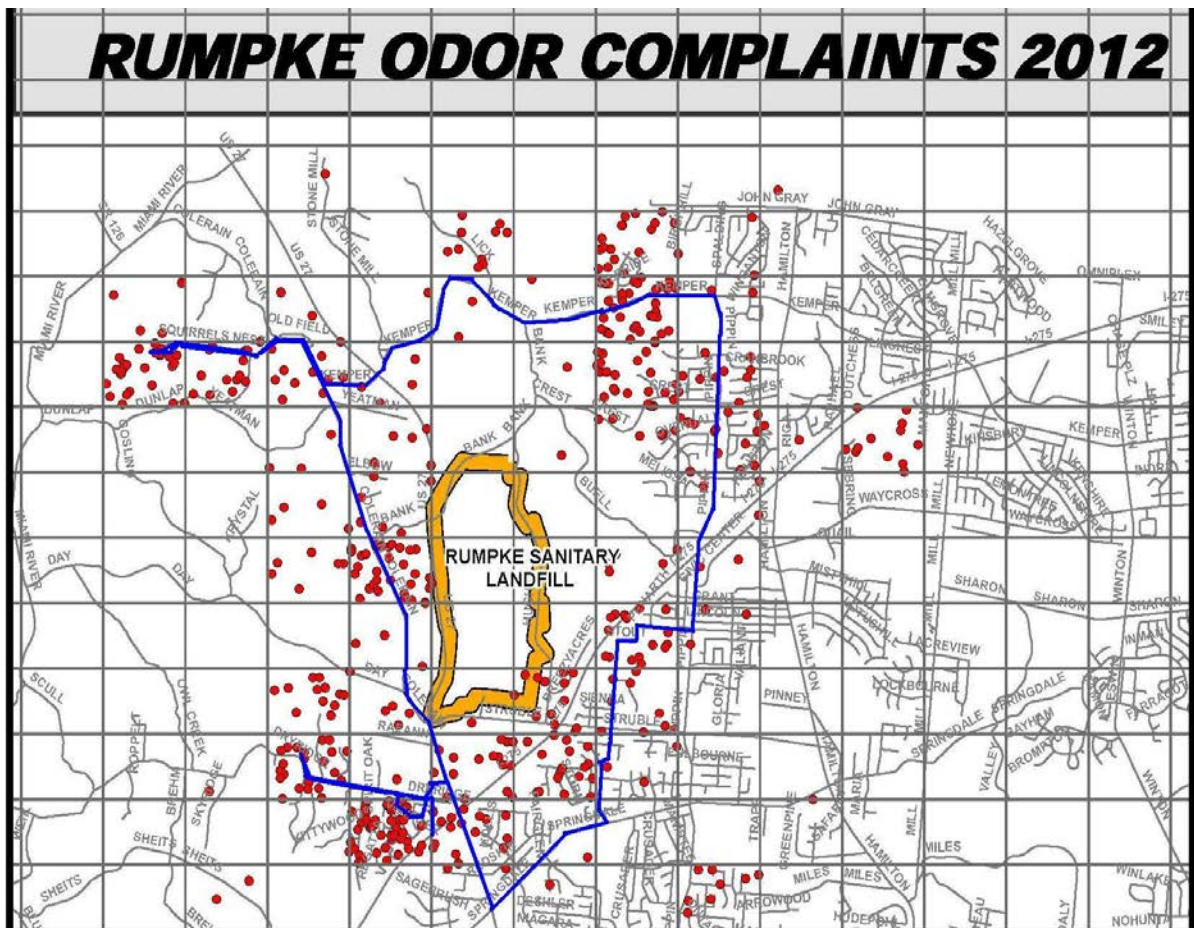

Odor Scale

0	Odor Not Detectable
1	Odor present in the air, which activates the sense of smell and the characteristics may or may not be distinguishable and/or definite, but not objectionable in short durations. This is characterized by occasional “whiffs” of odor, but is not persistent.
2	Odor present in the air, which easily activates the sense of smell, is very distinct and clearly distinguishable, tends to be objectionable and/or irritating, and is persistent in the community.
3	Odor present in the air, which is objectionable and causes a person to attempt to avoid it completely.
4	Odor present in the air, which is so strong that it is overpowering and intolerable for any length of time.

*0.5 increments have been added to allow description of odor between the criteria described above.

This scale has been disputed by industry as assigning a quantitative value to a subjective measurement. For this reason, future reports will utilize similar descriptions but replace the numbers with words such as No Odor, Slight, Moderate, Strong, and Over-Powering. Again, smaller increments will be utilized as necessary.

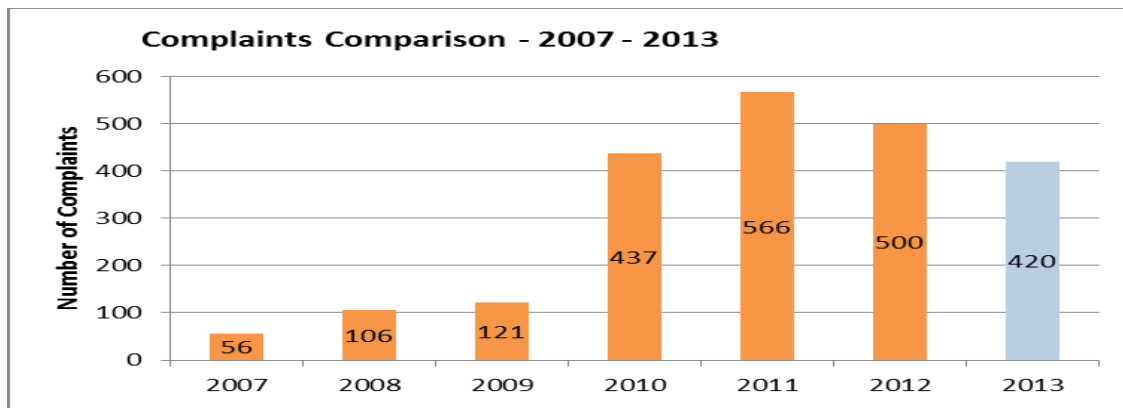

Figure 1

YEAR TO YEAR COMPARISONS

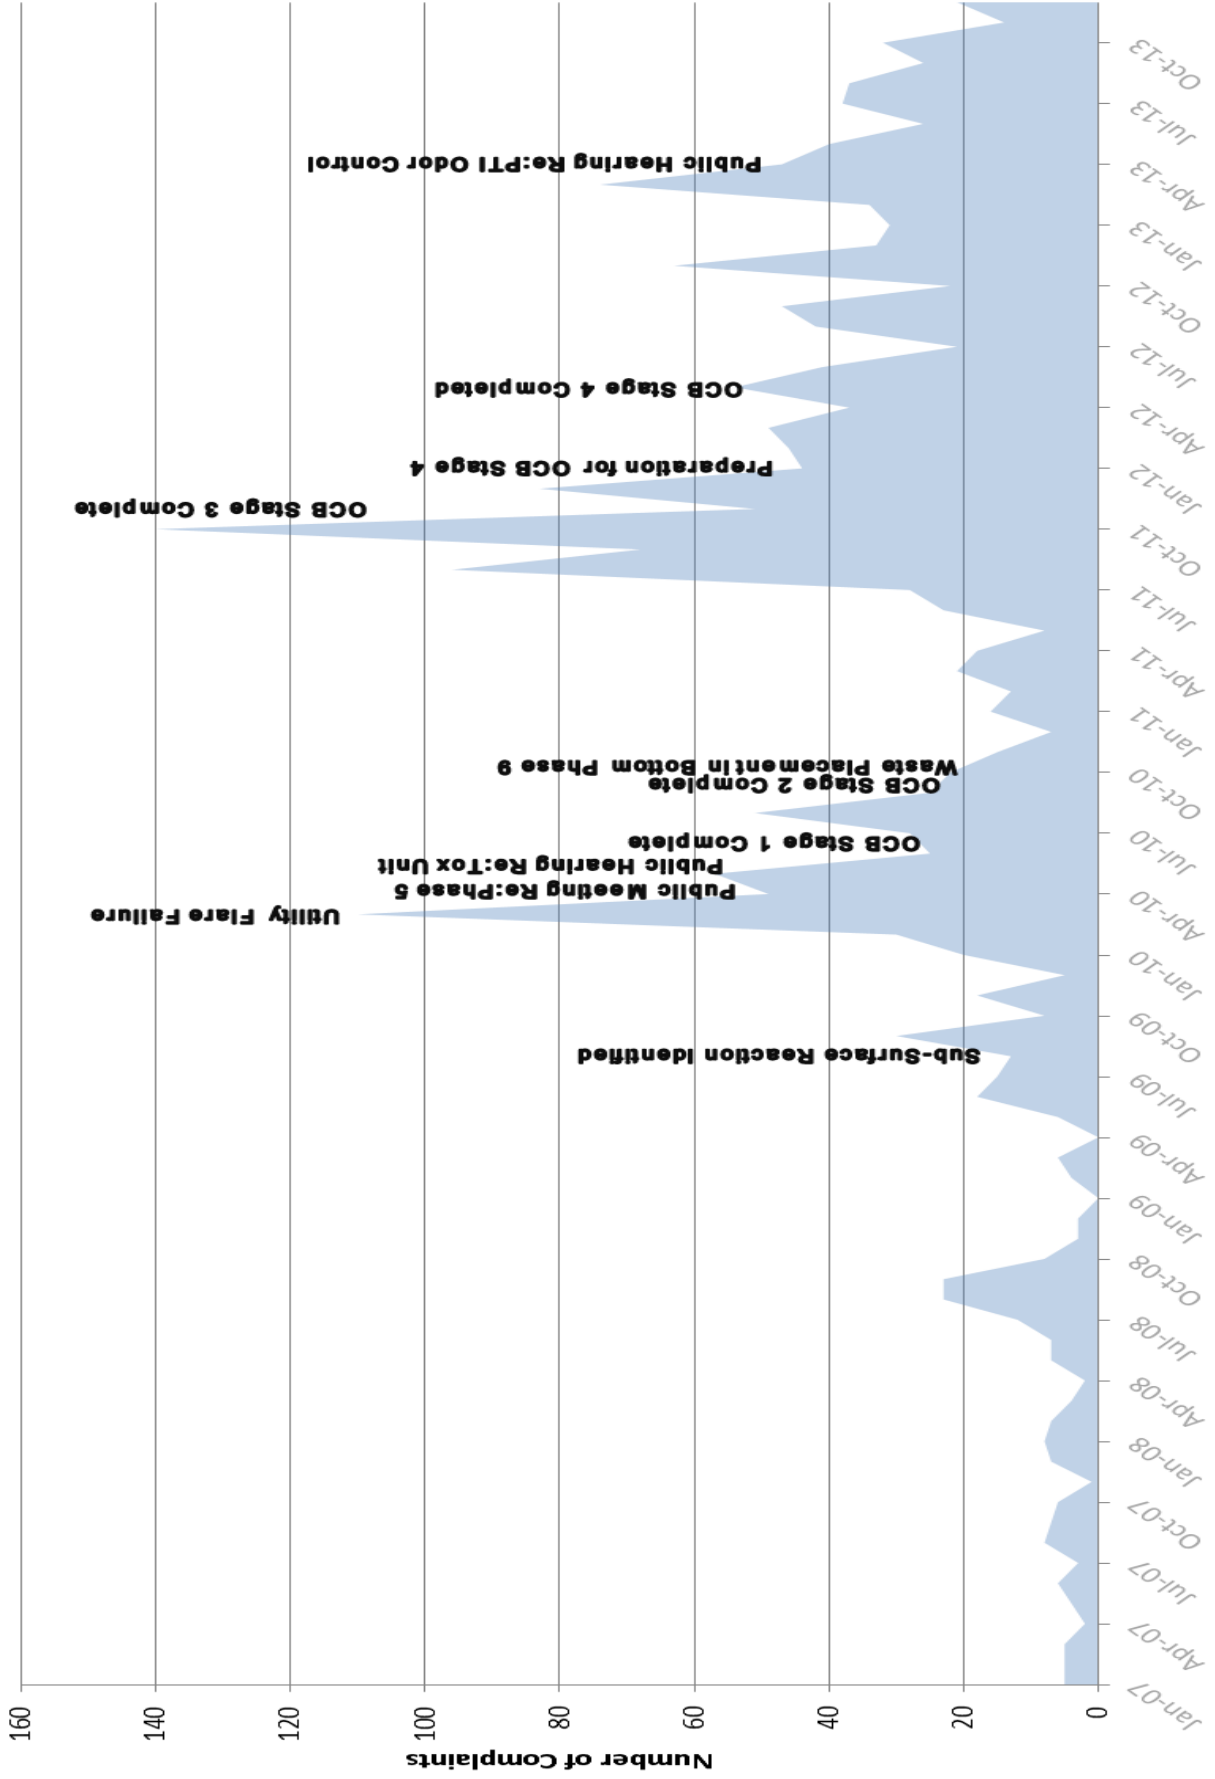

RUMPKE ODOR - DATA COMPARISON 2007 - 2013								
		2013	2012	2011	2010	2009	2008	2007
Complaints	# of Complaints Received	420	500	566	437	121	106	56
	# of Different Complainants	94	108	121	266	28	27	17
	% Anonymous Complaints	11	13	41	37	45	44	0
	% of Complaints at Residences	73	74	54	57	47	58	30
% Confirmed	By Responder in Vicinity	NA	80	94	94	66	77	30
	By Responder at Complaint Location	16	27	45	33	28	24	ND
Odor Type %	Gas Odor	68	54	42	52	32	20	ND
	Garbage odor	30	5	4	9	36	55	ND
	Mixed odor	1	41	51	39	32	25	ND
	Leachate odor	1	0	3	ND	ND	ND	ND
Response Time	% Less than one Hour	20	94	92	84	76	84	ND
Note: 2013 Data does not include Rumpke response data.								
*ND= No Data								

There were 420 complaints involving 94 complainants in 2013. This is a reduction from 2012 complaints. Ninety-two of these complaints involve use of deodorizer by the facility. Very few complaints are anonymous at 11 percent, continuing a short trend from 2012. Seventy-three percent of the complaints were at the caller's residence. Sixteen percent of all complaints were confirmed at the complainant's location. The majority (68%) of off-site odors continue to be phase 5 reaction or gas odors. The percent of complaints responded to within the hour has dropped to 20 percent from an average of 90 percent over the past three years due to the fact that Rumpke response data is no longer included in the dataset. There has been no change in relay of, and response to complaints by Rumpke, so true response time is assumed to be similar to years past.

Over the past 7 years, peak odor complaints were experienced in 2011, with 566 complaints. 2013 appears to be in line with 2010 where 437 complaints were received. Short-term is trending downward from the peak of 566 in 2011.

Complaints Timeline - 2007 - 2013

The timeline graph reveals some possible influencing factors in the peaks and valleys of complaints.

DAYS

	Numb	Percent
Day of the Year (out of 365)	365	100%
Days with Complaints (out of 365)	198	54%
Days with Observations (out of 365)	199	55%
Observed Days with no odor noted	60	30%
Observed Days with odor noted >0	139	70%
Observed Days with odor noted >1	6	3%
On days of observation the type of odor observed		
Observed Days with Garbage Odor (out of 199)	59	30%
Observed Days with Phase 5 Odor (out of 199)	115	58%
Observed Days with Other Odors (gas,leachate,mixe	9	5%

With increased capabilities in data capture and better presence at and near the landfill to assess odor, new indices are possible. In 2013, there have been complaints received 54 percent of the days. Of the days HCPH or Air Quality has been making odor observations, landfill related odor was noted 70 percent of the time. However, three percent of those days was odor noted of an intensity of greater than one.

COMPLAINT NUMBERS

Complaint Location	Odor Intensity 0-4 Scale							Total	Percent
	0	0.5	1	1.5	2	2.5			
No	25	80	106	1	4	1	216	35%	
Yes	334	33	27	2	1	0	398	65%	
Grand Total	359	113	133	3	5	1	614	100%	

Confirmed Odors	Odor Intensity 0-4 Scale					Total	Percent
	0.5	1	1.5	2	2.5		
Complaint Location Yes	33	27	2	1	0	63	16%

Response Time	#	%
Reponse within 1 hour	81	20%
Response 1 to 4 hours	76	19%
Response 4-24 hours	139	35%
Response 24-48 hours	62	16%
Response over 48 hours	39	10%
	397	100%

Of the 614 observations, 398 were associated with a complaint location. The remainder (216) of the observations were at other locations along the surveillance loop.

Above you can see the intensity break down with 0 being no odor noted. Of the 16 percent confirmed complaint locations, nearly all were at or below an odor intensity of one.

The majority of complaints (74 percent) are being responded to within 24 hours, with a good portion (20%) within the hour. With Rumpke response data no longer being included in the dataset these are solely response times of HCPH and Air Quality.

TYPE OF ODOR

Type of Odor with Intensity	Odor Intensity 0-4 Scale						Total	Percent
	0	0.5	1	1.5	2	2.5		
No Landfill Related Odor	359						359	58%
Phase 5 Reaction Odor		63	91	2	4	1	161	26%
Garbage - Working Face		47	38				85	14%
Mixed		2	2	1	1		6	1%
Leachate			1				1	0%
Landfill Gas/Gas Plant		1	1				2	0%
Grand Total	359	113	133	3	5	1	614	100%

The majority of confirmed off-site odors continue to be phase 5 reaction odor. A breakdown of intensity of each type reveals phase 5 odors are also of a stronger off-site intensity.

WEATHER CONDITIONS

There do not appear to be any significant trends in odor with relation to the weather data. Weather data quality has improved in the second half of 2013 with access granted by Rumpke to the on-site weather station data.

DEODORIZER

Number of Complaints (all)	420	Percent
Complainant described deodorizer in complaint	92	22%
Complainant described strictly deodorizer	58	14%

Observations with Deodorizer Noted	Complaint Location		
	No	Yes	Total
	41	36	77

Rumpke utilizes deodorizer as part of the odor control plan. Some residents have complained about the use of this deodorizer. Of the total, 420 complaints received 2013, 92 or 22 percent of the complainants mentioned deodorizer in their complaint. Of these 92, 58 of the complaints were exclusively a complaint about the use of deodorizer.

During complaint investigations if deodorizer is observed at the complaint location, the presence is recorded. The presence of deodorizer was also recorded if landfill related odors were also noted at a non-complaint location. In other words, the presence of only deodorizer at a non-complaint location is not recorded in the dataset.

Maps

Four maps are included as an attachment to this report.

1. Complaint Locations – 420 complaint locations in 2013 with color indicating type of odor and number tag indicating intensity.
2. Confirmed Complaint Locations – 63 confirmed complaint locations in 2013 with color indicating type of odor and number tag indicating intensity.
3. Confirmed Complaint Locations with intensity of 1 or greater in 2013.

Summary:

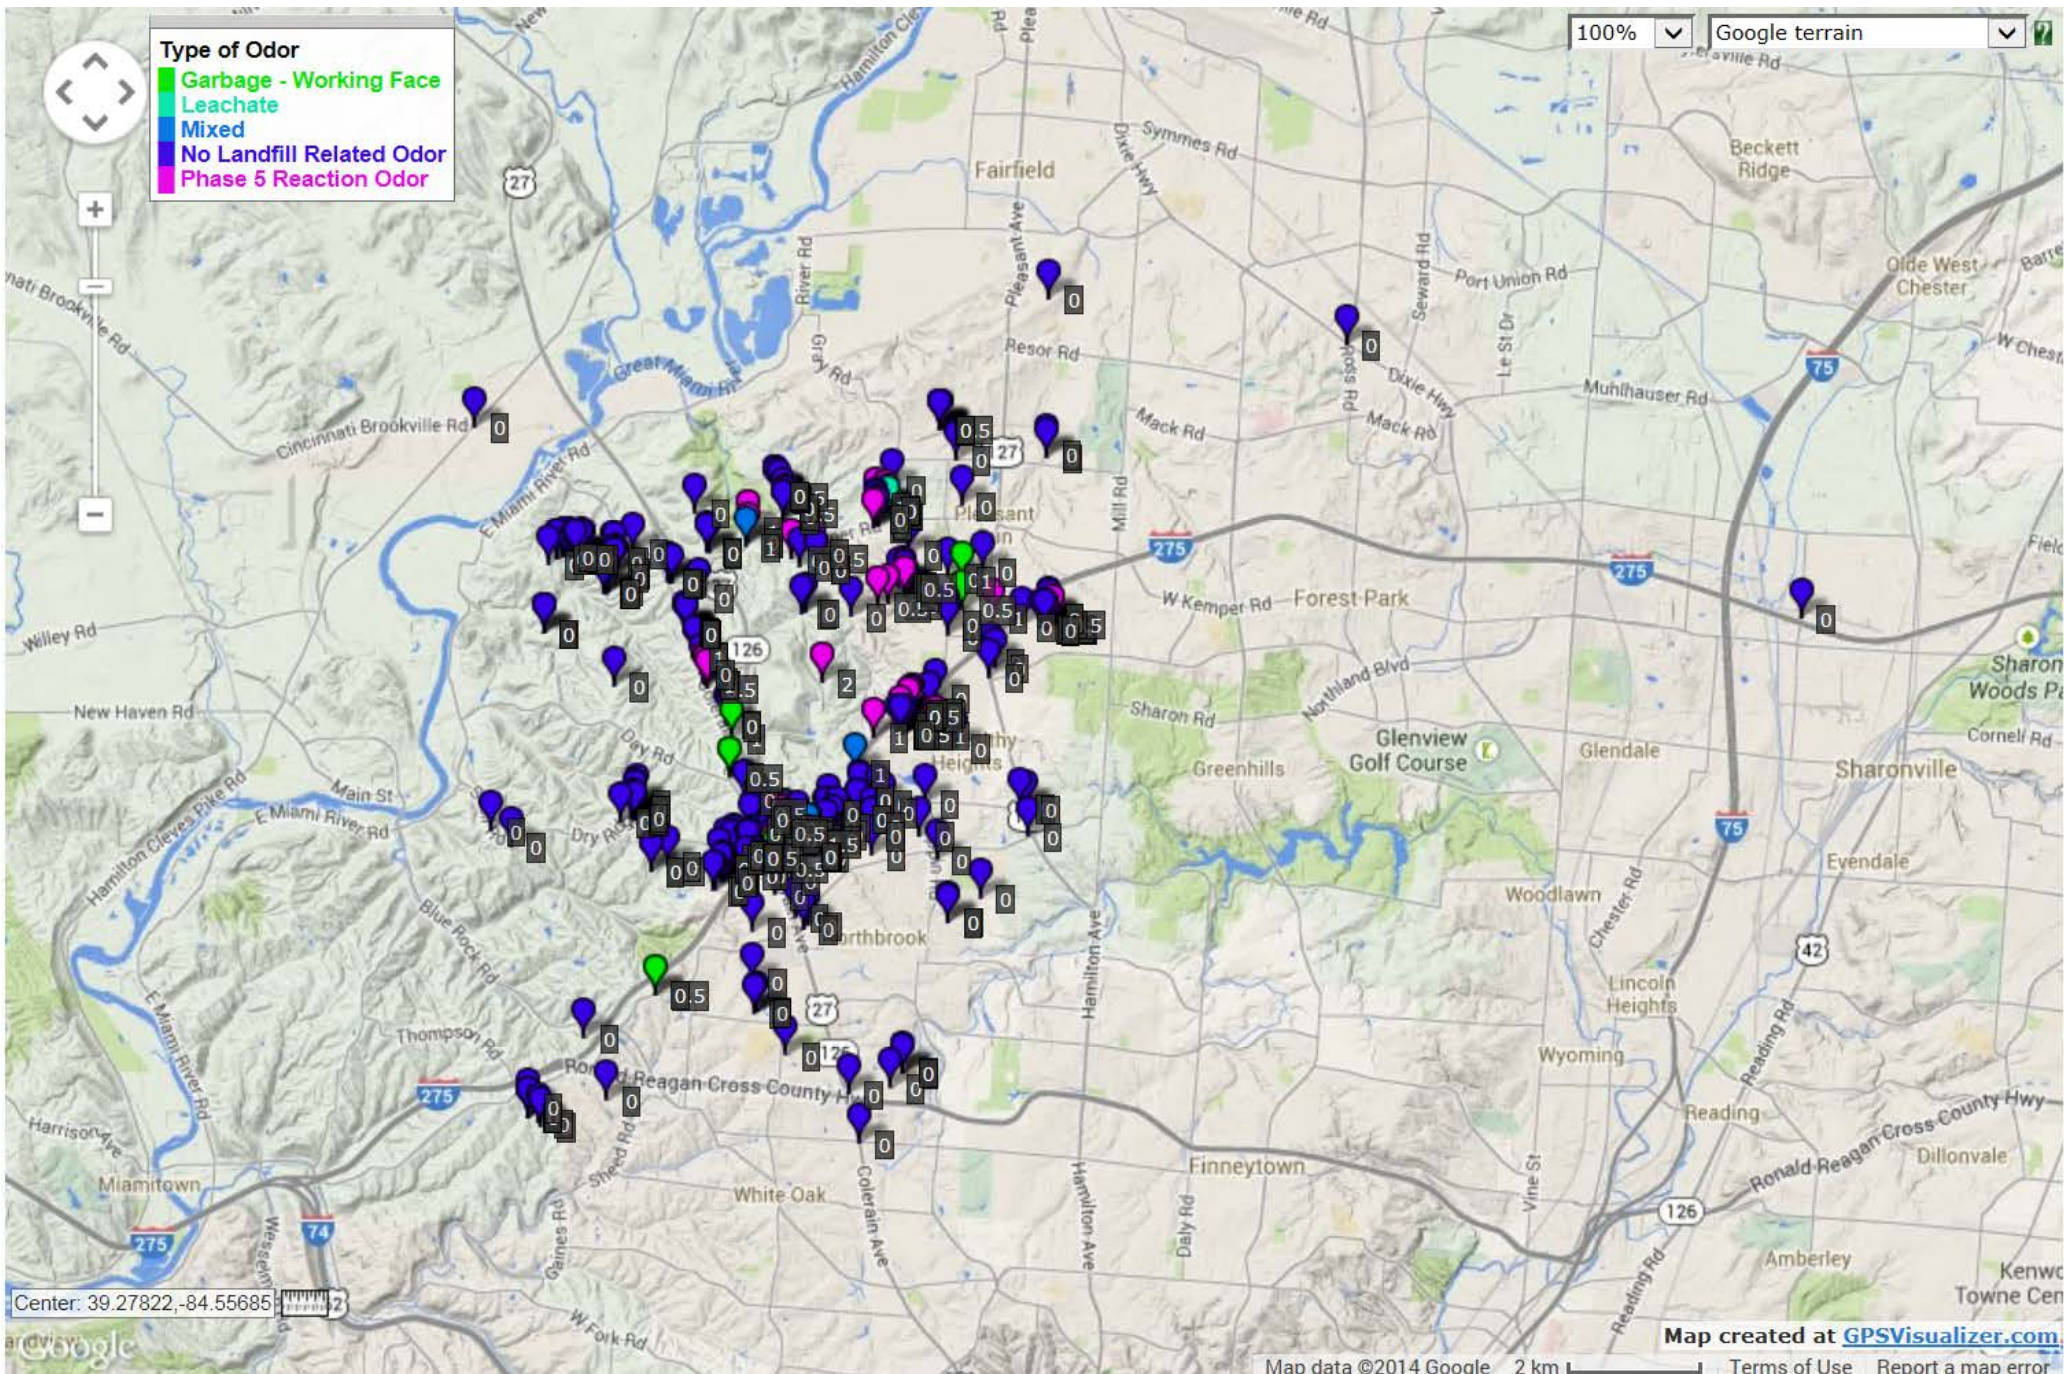

The sub-surface event occurring in the north end of the landfill contributed to offsite odors beginning as early as September 2009. A comprehensive action plan to address odors and return operations to normal in the affected area continues to be implemented. A formal Odor Control Management Plan addressing the affected area and other sources of odor from the landfill continues to be utilized by the facility.

Rumpke has attempted to address odors from the reaction with application and rework of clay soils, plastic Odor Control Blanket (OCB), increasing flare capacity, eliminating odorous leachate from residential sewers, and numerous odor neutralizing systems (deodorizers). Most recent efforts have centered on eliminating protrusions from the OCB where possible and deploying an improved OCB with an odor impermeable membrane (EVOH – Ethyl Vinyl Alcohol).

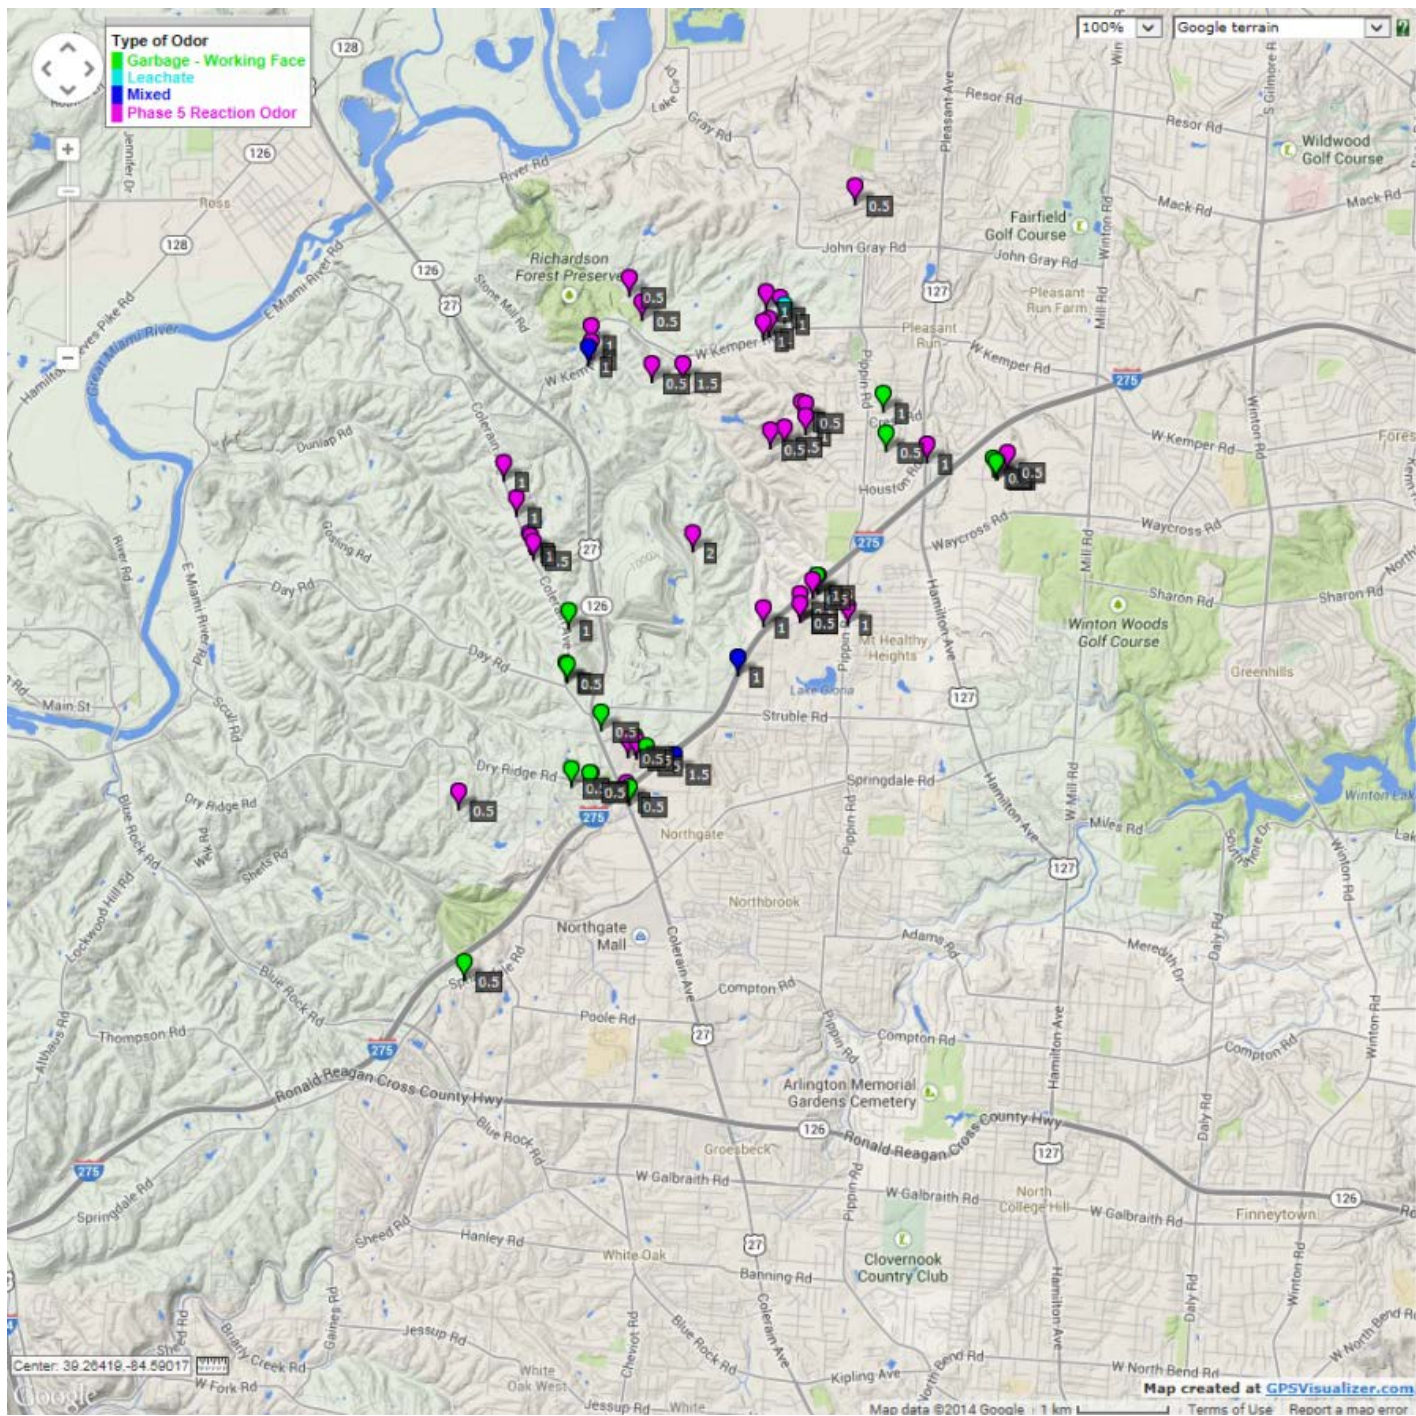

Hamilton County Public Health continues to work with Rumpke personnel and other agencies to identify measures to minimize the occurrence of off-site odors as much as possible. Additional efforts and odor control technologies continue to be evaluated to better target identified odor sources.

Unannounced inspections and odor surveillance continue in order to monitor the facility during all complaint times.

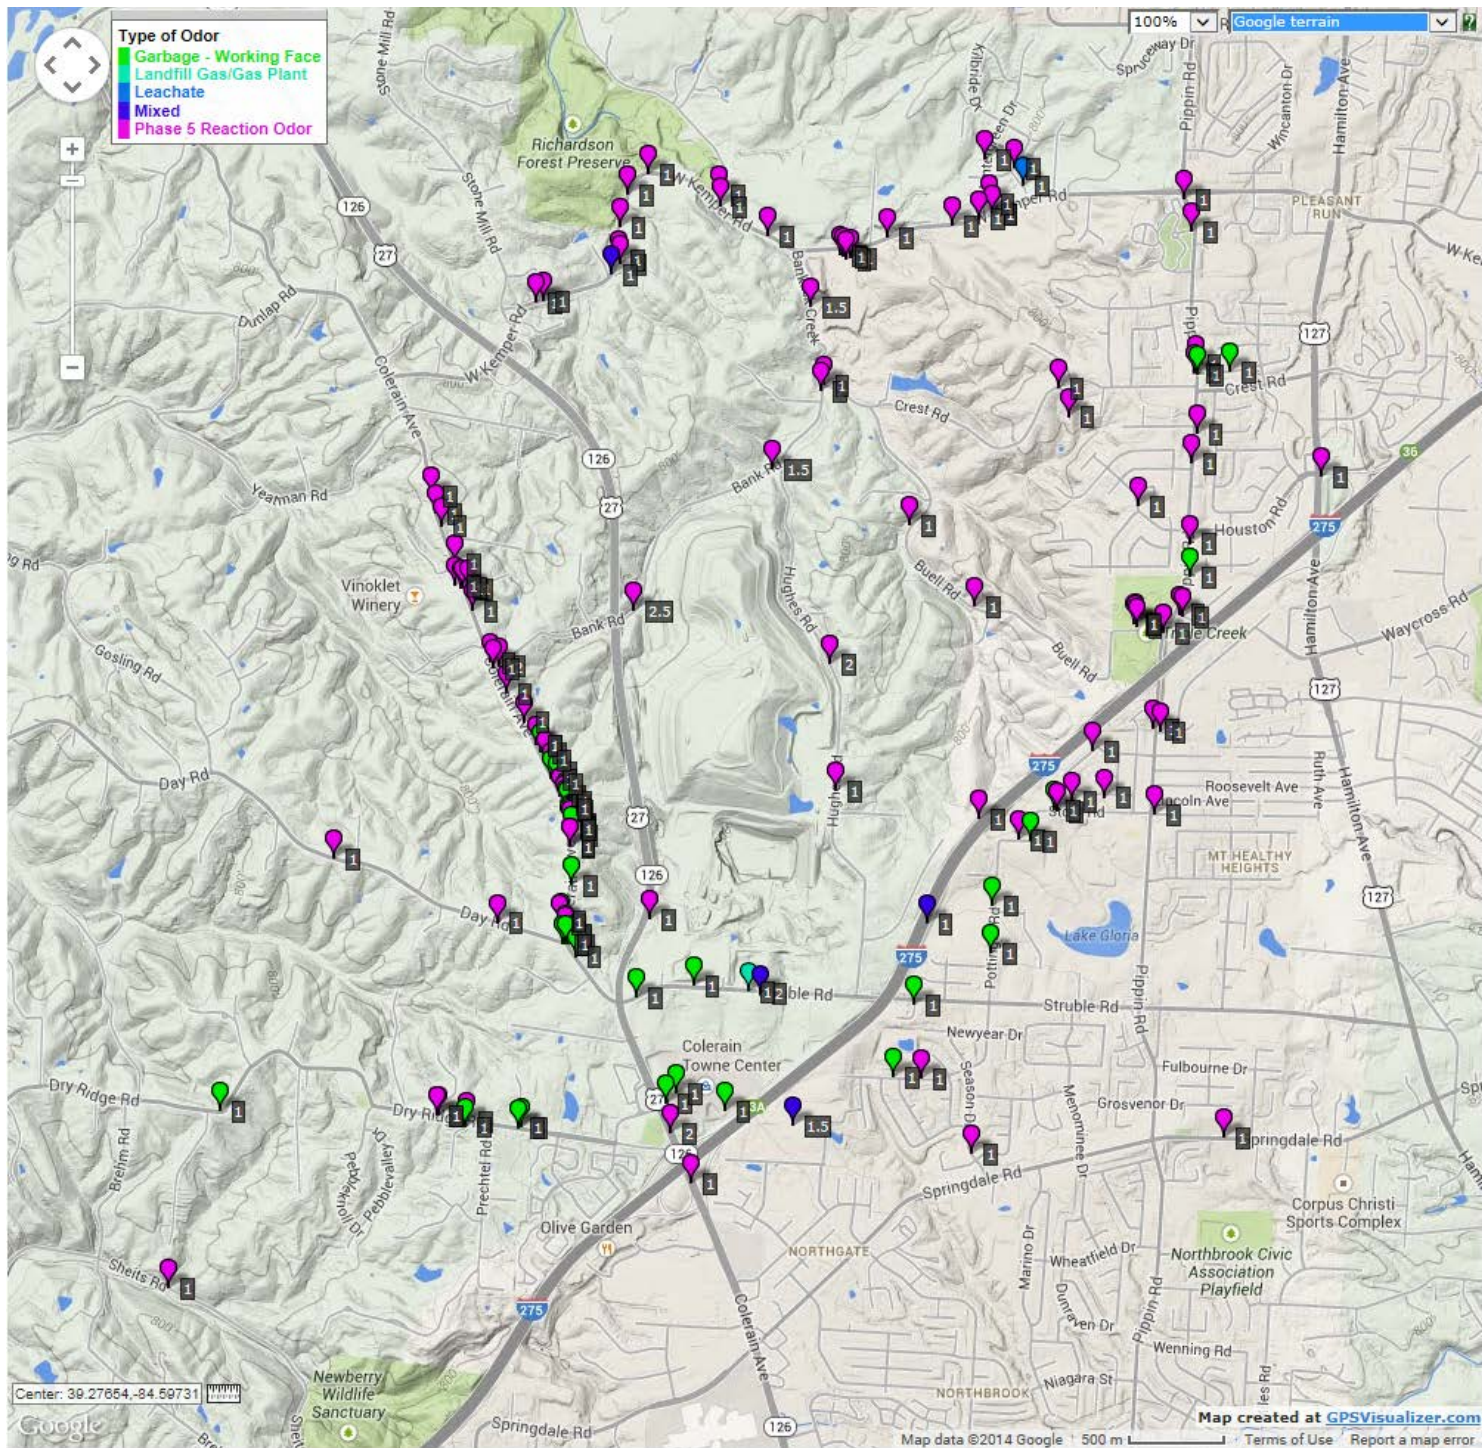

The 24-Hour Odor Complaint Hotline and complaint response continues to allow for the rapid investigation of odor complaints associated with Rumpke Sanitary Landfill.

2013 Complaint Locations - Tag indicates intensity 0-4 scale

2013 Confirmed Complaint Locations - Tag indicates intensity 0-4 scale

2013 Confirmed Odor Locations Intensity 1 or Greater - Tag indicates intensity 0-4 scale
